REGULATIONS FOR THE DEGREE OF
MASTER OF EDUCATION
(MEd)

(See also General Regulations and Regulations for Taught Postgraduate Curricula)

Any publication based on work approved for a higher degree should contain a reference to the effect that the work was submitted to the University of Hong Kong for the award of the degree.

Ed21 Admission requirements

To be eligible for admission to the degree of Master of Education, a candidate
(a) shall comply with the General Regulations and the Regulations for Taught Postgraduate Curricula;
(b) shall hold a Bachelor’s degree of this University or a qualification of equivalent standard from this University or another comparable institution accepted for this purpose;
(c) shall satisfy the examiners in a qualifying examination, if required; and
(d) for a candidate who is seeking admission on the basis of a qualification from a university or comparable institution outside Hong Kong of which the language of teaching and/or examination is not English, shall satisfy the University English language requirement applicable to higher degrees as prescribed under General Regulation G2(b).

Ed22 Qualifying examination

(a) A qualifying examination may be set to test candidates’ formal academic ability or their ability to follow the curriculum prescribed.
(b) Candidates who are required to satisfy the examiners in a qualifying examination shall not be permitted to register until they have satisfied the examiners in the examination.

Ed23 Period of study

The curriculum shall normally extend over one academic year of full-time study or two consecutive academic years of part-time study. Candidates shall not be permitted to extend their studies beyond the maximum period of registration of two consecutive academic years of full-time study or four consecutive academic years of part-time study, unless otherwise permitted or required by the Board of the Faculty.

Ed24 Curriculum requirements

To complete the curriculum, candidates shall
(a) satisfy the requirements prescribed in TPG 6 of the Regulations for Taught Postgraduate Curricula;
(b) follow instruction in the syllabuses prescribed and complete all specified work as required;
(c) satisfy the examiners in all assessment tasks as may be required;
(d) complete and present a satisfactory dissertation or project on an approved topic; and
(e) satisfy the examiners in an oral examination, if required.

Ed25 Advanced standing and credit transfer

(a) Advanced standing may be granted to candidates who have successfully completed one or more
courses in the Postgraduate Certificate in Advanced Educational Studies curriculum of this University or another qualification of equivalent standard accepted for this purpose.

(b) Candidates may be granted advanced standing subject to the following conditions:
   (i) the course(s) is appropriate for the strand applied for; and
   (ii) the application for advanced standing is received within five years of successful completion of the relevant courses or graduation from the Postgraduate Certificate in Advanced Educational Studies or another qualification of equivalent standard accepted for this purpose, whichever is later.

(c) The amount of credits to be granted for Advanced Standing shall be determined by the Board of the Faculty, in accordance with the following principles:
   (i) a candidate may be granted a total of not more than 20% of the total credits normally required under a curriculum for Advanced Standing unless otherwise approved by the Senate; and
   (ii) credits granted for Advanced Standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

(d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA.

(e) Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted.

(f) Application for advanced standing shall be made prior to the commencement of the curriculum, and should be accompanied by copies of academic transcripts to support the application.

(g) The combined total number of credits to be granted for Advanced Standing and credit transfer shall not exceed half of the total credits normally required in accordance with this regulations and syllabuses.

---

Ed26    Exemption

Candidates may be exempted, with or without special conditions attached, from the requirement prescribed in the regulations and syllabuses governing the curriculum with the approval of the Board of the Faculty, except in the case of a capstone experience. Approval for exemption of a capstone experience may be granted only by the Senate with good reasons. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

---

Ed27    Dissertation

(a) Candidates who select the dissertation option shall
   (i) submit the title of their dissertation for approval not later than six months before the formal submission of the dissertation; and
   (ii) submit a statement that the dissertation represents their own work undertaken after registration as a candidate for the degree.

(b) The examiners may also prescribe an oral examination on the dissertation.

---

Ed28    Assessment

(a) Candidates shall be assessed by diverse forms of assessment as prescribed by the examiners during the course of their studies.

(b) Candidates shall not be permitted to repeat a course for which they have received a passing grade for the purpose of upgrading.

(c) Courses in which candidates are given an F grade shall be recorded on the transcript of the
candidate, together with the new grade if the candidate is re-assessed or repeats the failed course.
(d) There shall be no appeal against the results of examinations and all other forms of assessment.

Ed29   Re-assessment

(a) Candidates who have failed to satisfy the examiners in any part of the assessment at the first attempt may be permitted to present themselves for re-assessment in the failed course(s) as determined by the Board of Examiners.
   (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
   (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
   (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
   (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
(b) Candidates who have presented a dissertation which has failed to satisfy the examiners at the first attempt may be permitted to re-present the dissertation within a period of not more than 12 months after it is deemed unsatisfactory.

Ed30   Discontinuation

Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies, if they have:
(a) failed to satisfy the examiners upon re-assessment of a course, a project or a dissertation; or
(b) exceeded the maximum period of registration specified in Regulation Ed23.

Ed31   Grading system

Individual courses shall be graded according to the following grading system:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Standard</th>
<th>Grade Point</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td></td>
<td>4.3</td>
</tr>
<tr>
<td>A</td>

Ed32   Award of degree

(a) To be eligible for the award of the degree of Master of Education, candidates shall
   (i) comply with the General Regulations and the Regulations for Taught Postgraduate Curricula; and
   (ii) complete the curriculum and satisfy the examiners in accordance with these regulations and the syllabuses.
(b) On successful completion of the curriculum, candidates who have shown exceptional merit may be awarded a mark of distinction, and this mark shall be recorded in the candidates’ degree diploma.
SYLLABUSES FOR THE DEGREE OF
MASTER OF EDUCATION
(MEd)

The degree of Master of Education (MEd) is a postgraduate degree awarded for the satisfactory completion of a prescribed programme in one of the following strands:

I. GENERALIST STRAND:
   Educational Studies

II. SPECIALIST STRAND* (subject to change):
   1. Chinese Language and Literature
   2. Chinese Language Education
   3. Comparative and Global Studies in Education and Development
   4. Curriculum and Pedagogy
   5. Designing Powerful Learning Environments
   6. Early Childhood Education
   7. Education and Society in China
   8. Educational Administration and Management
   9. English Language Education
   10. English Language Studies
   11. Higher Education
   12. Language Across the Curriculum
   13. Mathematics Education
   14. Teaching and Learning Chinese Language
   15. Teaching Chinese as a Second Language
   16. Teaching of Mathematics in an International Context
   17. Youth Studies

(* Not all specialisms may necessarily be offered every year.)

Candidates are required to complete a total of 60 credits. The total prescribed work includes self-study, library and field research where appropriate, online work such as forum discussion, e-portfolio production, etc.

I. GENERALIST STRAND

The Generalist Strand consists of a core course in educational studies, a research methods course (12 credits), and either 6 general elective course plus a project (6 credits each), or 4 general elective courses (6 credits each) plus a dissertation (18 credits).

MEDD6014 Methods of research and enquiry (12 credits)

Candidates are provided with a systematic introduction to educational research methods, with a particular emphasis on critical reading and understanding of a variety of approaches to research in education, including methods of data collection and analysis. It is a combination of lectures, workshops and seminars in the aspects of research skills training.

Assessment: 100% coursework.

MEDD6751 Educational studies (6 credits)

Public education systems and private markets tend to function together to reproduce patterns of poverty and educational inequality that reflect the social and economic environment that defines our globalized knowledge economies. Poorer children tend to be exposed to poorer educational experiences, leading to
lower occupational attainment and performance. Wealthier children tend to be exposed to richer educational experiences, both within mainstream schools and within the private market for educational goods and services. This impacts their social mobility, earnings and career expectations and paths, thus explaining cycles if inequity and inequality that are often reproduced in developed and developing countries. Education is a leverage for development, but one that is not without flaws. In this course we draw on a broad range of research and practice to examine the roles of public policies economic agents, interested stakeholders (e.g. families), and public and private educational institutions in shaping and/or reproducing patterns of social and economic inequality. The overall objective of the course is to raise awareness of these issues and prepare participants for careers as educational entrepreneurs, innovators, and policy reformers and enlighten them about the relevance and understanding of patterns of reproduction of inequalities in education and search for opportunities to disrupt these patterns. Several cases will be analyzed abroad (but heavily focused in Hong Kong). This course will help those who work (or consider working) within schools and other educational organizations to introduce and sustain positive change.

Assessment: 100% coursework.

MEDD8998 Project (6 credits) (Capstone Experience)

The project consists of independent study and a negotiated assignment, normally between 4,000 and 5,000 words in length, on an approved topic which builds on the candidate’s prior studies in education. Assessment: 100% coursework.

MEDD8999 Dissertation (18 credits) (Capstone Experience)

The dissertation is normally between 12,000 and 20,000 words in length depending on the nature of the study, on an approved topic in the specialist area. Candidates are required to participate in a series of dissertation seminars. Assessment: 100% coursework.

II. SPECIALIST STRAND

Majority of the specialisms in the Specialist Strand consists of a research methods course (12 credits), 4 specialist courses (6 credits each), and either 1 elective course (6 credits) plus the dissertation (18 credits), or 3 elective courses plus a project (6 credits each).

The exceptions are the specialisms of Chinese Language and Literature, English Language Studies, and Teaching and Learning Chinese Language which do not have the dissertation option. Candidates are required to complete a research methods course (12 credits), 4 specialist courses, 3 specialist elective courses and a project (6 credits each).

MEDD6014 Methods of research and enquiry (12 credits)

Candidates are provided with a systematic introduction to educational research methods, with a particular emphasis on critical reading and understanding of a variety of approaches to research in education, including methods of data collection and analysis. It is a combination of lectures, workshops and seminars in the aspects of research skills training. Assessment: 100% coursework.

MEDD8998 Project (6 credits) (Capstone Experience)

The project consists of independent study and a negotiated assignment, normally between 4,000 and
5,000 words in length, on an approved topic which builds on the candidate’s prior studies in education. Assessment: 100% coursework.

---

**MEDD8999  Dissertation (18 credits) (Capstone Experience)**

The dissertation is normally between 12,000 and 20,000 words in length depending on the nature of the study, on an approved topic in the specialist area. Candidates are required to participate in a series of dissertation seminars. The dissertation option is not available for the Chinese Language Literature, the English Language Studies and the Teaching and Learning Chinese Language specialisms. Assessment: 100% coursework.

---

1. **CHINESE LANGUAGE AND LITERATURE 中國語言及文學**

It is a coursework and project specialism. It aims to provide teachers of Chinese language and literature with approved subject knowledge training appropriate to the postgraduate level. The specialism focuses in particular on the development of participants’ knowledge and pedagogical skills about various aspects of Chinese literature, language, and culture, in particular with a view to equipping participants with the knowledge and expertise necessary for high-level teaching in the Chinese curriculum.

Candidates are required to complete all 4 specialist courses and 3 of the specialist elective courses (6 credits each). Those elective courses, however, may not necessarily be offered every year.

**Specialist Courses**

**MEDD6682  Modern Chinese literature [現代文學] (6 credits)**

This course examines in depth high-quality modern Chinese poetry, prose, drama, and fiction of the twentieth century. It aims to explore the meaning of modernity of Chinese literature from literary, social, and political perspectives. It also addresses the development of different genres and literary schools. Participants will read representative works of modern Chinese writers from Mainland China, Taiwan, and Hong Kong. Selected topics related to styles and structures of texts, social and political circumstances, literary theories and thoughts will also be discussed.

Assessment: 100% coursework.

**MEDD6684  Chinese culture [中國文化] (6 credits)**

This course provides an in-depth view of the essence of Chinese culture and focuses on its value systems. Topics include the core concepts in Chinese philosophy, ethics, religion, rituals, fine art, folk art, literature, science, technology, and social structure. Objectives of this course are: (1) Helping students acquire essential cultural knowledge; (2) Acquainting students with the traditional thinking and wisdom of the Chinese people, especially those revealing Confucianism and Taoism; and (3) Facilitating students to reflect on the value systems of Chinese culture.

Assessment: 100% coursework.

**MEDD6686  Classical Chinese literature [古典文學] (6 credits)**

This course provides an in-depth view of the essence of classical Chinese literature. Special emphasis is placed on major classical Chinese genres and their salient styles and schools, including poetry, prose, fiction, and drama. Students will participate in learning through interactive discussions. Objectives of this course are: (1) Helping students achieve a deep understanding of various classical Chinese genres; (2) acquainting students with the latest trend of study in classical Chinese literature; and (3) developing students’ capability of analyzing classical Chinese literature.

Assessment: 100% coursework.
MEDD6689  Chinese fiction and creative writing [小說與創意寫作] (6 credits)

This course integrates the study of fiction with creative writing. Selected works of modern Chinese fiction will be analyzed in terms of narrative theories and techniques such as structure, character, voice, and point of view. More importantly, this course helps students develop their capacity to produce insightful interpretations of what they read. The learning is then reinforced by creative writing. Based on the selected works, students will write their own exercises in various genres to respond to their reading of fiction. Accordingly, students can have thorough understanding of the literary works and can apply this model to their teaching of Chinese.
Assessment: 100% coursework.

Specialist Elective Courses

MEDD6691  Translation literature [翻譯文學] (6 credits)

This course aims at helping students to read systematically literary pieces, which were translated into Chinese. Those works include European, American, and Russian poetry, fiction, and drama. By reading classics of world literature, students are able to: (1) understand the deep meaning of literature, especially the exploration of human nature; (2) appreciate different literary styles, genres, and techniques; (3) learn cultures and values of different countries from various perspectives. The course will introduce the general development of Western literature and help students select appropriate translation versions. Students will discuss the themes, language, and cultural characteristics of the translations through reading aloud, creative drama, and literary journals. Similarities and differences between the translated literary texts and relevant Chinese literary works as well as adapted films will also be analyzed. Students will therefore better understand the nature of literature and develop their critical thinking through comparison.
Assessment: 100% coursework.

MEDD8101  Modern Chinese language and text appreciation [現代漢語與文本賞析] (6 credits)

This course provides an innovative approach to studying language arts and appreciating texts. Topics include Chinese phonology, lexis, semantics, grammar, rhetoric, modern genre of Standard Modern Chinese (SMC), and practical applications of linguistics. Students can employ their knowledge of modern Chinese language in literature, e.g. linguistic stylistics, music in meter of poetry, speech act theory, and lexical cohesion in modern literary texts. This approach of discourse analysis will also be applied to the reading of non-literary texts such as newspaper articles, advertisements, and all kinds of discursive prose.
Assessment: 100% coursework.

MEDD8801  Classical Chinese language and the reading of classical texts [古代漢語與文言作品閱讀] (6 credits)

This course is designed for teachers who teach Chinese language or Chinese literature. It aims to equip students with advanced knowledge of classical Chinese language, which includes etymology, lexis, phonology, and grammar. It enhances students’ ability to read classical Chinese, analyze literary texts, and teach Chinese language and literature by addressing Chinese language issues from historical linguistic perspective. The course covers the following topics: (1) Chinese Paleography (文字學), with emphasis on nature, structure and classification of Chinese character, latest development of the studies of the “Six Classifications” (六書); (2) Classical Chinese phonology (音韻學), with emphasis on changing and evolution of phonetic system from the ancient (Han and pre-Han), medieval (post-Han to Song) to modern (particularly, Putonghua and Cantonese) times; (3) Chinese Etymology (詞源學), with emphasis on semantic change and semantic system of Chinese lexis by etymological studies of lexis; (4) Classical Chinese written grammar (文言語法), with emphasis on typological features of constructions of classical Chinese written grammar; (5) Application of classical Chinese language to the reading of classical texts.
2. CHINESE LANGUAGE EDUCATION 中國語文教育

This specialism provides teachers, language educators and teacher educators with theoretical knowledge and the latest research developments in Chinese linguistics and language education and enhances their pedagogical skills. This specialism also aims to promote research relevant to language in education in Hong Kong.

MEDD6068 Psycholinguistic aspect of learning and teaching of Chinese language [中國語文教育: 心理語言學觀點] (6 credits)

This course focuses on the psycholinguistic aspect of learning Chinese language. It examines the acquisition of phonology, vocabulary, and syntax, and also explores the processes of comprehension and reading, composing processes, language and thought. Recent development in Chinese psycholinguistic research related to learning and instruction is included. Upon the completion of this course, students should be able to understand the basic principles of psycholinguistics in Chinese; and apply the principles of psycholinguistics to the teaching and research of Chinese.
Assessment: 100% coursework.

MEDD6082 The Chinese language curriculum – Development, implementation and evaluation [中國語文課程設置，實施與評鑒] (6 credits)

This course introduces the nature and intention of the Chinese Language curriculum as a mother tongue language. Important concepts on the development, implementation and dissemination of the Chinese Language curriculum will be discussed. Analysis of the similarities and differences between the Chinese Language curriculum developed by different Chinese speaking regions will be conducted. Models of curriculum evaluation and their application and adaptation in evaluating the Chinese Language will be introduced and participant will be given.
Assessment: 100% coursework.

MEDD6083 Chinese language assessment [中國語文評估] (6 credits)

This course introduces important concepts of formative assessment, summative assessment, assessment for learning, assessment of learning, assessment as learning and the relationship between these concepts in the field of Chinese language education. The course also provides practical modes and strategies, including constructing and evaluating language tests, interpretation and applications of test scores, classroom questioning techniques, feedback, peer and self assessment, portfolio building, rubrics design, etc. This course gives practices school-based assessment and qualitative feedback system to focus more on individual students' development progress in learning Chinese language.
Assessment: 100% coursework.

MEDD8818 From language to discourse: Application in Chinese language teaching [漢語語言與話語：中國語文教學的應用] (6 credits)

The course aims at equipping Chinese language teachers with the knowledge of Chinese language and discourse, and the ability to apply such knowledge in learning and teaching Chinese for both native Chinese learners and linguistically diverse learners in Hong Kong. The course is designed to explore the latest research development in language and discourse from the perspective of functional-cognitive linguistics. Topics include the following aspects of Chinese language and discourse: orthographic and phonological representation, lexical semantics, grammatical construction, relationship among lexicon, grammar and discourse, and pragmatics. Special emphasis is given to various modes of discourse in Chinese and their linguistic realization. Critical approach to language and discourse as social action will also be covered.
Assessment: 100% coursework.
3. COMPARATIVE AND GLOBAL STUDIES IN EDUCATION AND DEVELOPMENT

Comparison is a fundamental tool for all forms of enquiry. When applied to education in an international setting, it assists in identification of factors which shape education systems, processes and outcomes, and instruments for improvement of those systems, processes and outcomes. The comparisons in this specialism will be framed by theories and understandings of the forces of globalisation. These forces bring benefits for many people, but can also have negative dimensions. This specialism will examine experiences through the lens of globalisation, identifying forces of continuity and change and the implications for educators. It will also focus on the nature of development in an international context and on the role of education in the processes of development. This will include analysis of all levels of formal education (early childhood to higher education), and various types of nonformal education. It will include particular reference to UNESCO’s evolving objectives for education in the context of the Sustainable Development Goals (SDGs). The set of specialist courses will also include focus on reform (and non-reform), providing conceptual explanations for what works (and does not work) in different settings and at different periods in history. East Asia provides an instructive arena for such comparison, but the course will also analyse experiences and patterns in other parts of the world.

MEDD6095 Addressing the global-local nexus in education (6 credits)

This course will develop students’ understandings of both local and global education policies and practices. Adopting a ‘glocalisation’ perspective, it will stress a new localism that stands as an act of resistance against globalisation and rootlessness to reclaim the significance of the local in the global age. Drawing on local experiences and phenomena as a source of learning, this course will introduce students to an understanding of education that is conscious of local places to enable them to be inducted into the knowledge and patterns of behaviour associated with responsible community engagement. Assessment: 100% coursework.

MEDD6097 Themes and approaches in the field of comparative education (6 credits)

This course will introduce students to the history and nature of comparative education as a field of enquiry. It will note the principal dimensions of the field as conventionally defined in the literature on the topic, and will consider some variations in emphasis in scholarly communities and other actors in different parts of the world. The course will also consider the nature and contents of some key vehicles for publishing comparative education research, including journals, books and reports by international agencies. The course will conclude with an overview of the nature and directions of the field. Assessment: 100% coursework.

MEDD6098 Critical issues in educational reform (6 credits)

This course examines different themes, contexts, and theories regarding educational reform from an international comparative and historical perspective. The course begins with an exploration of the concepts of policy and reform, aligned with their emergence vis-à-vis the development of schooling and education. This will be associated to what knowledge is, what knowledge is taught, and where and how it is taught. The main idea underlines that knowledge is not a taken-for-granted matter, but rather an interpreted and constructed phenomenon. A discussion on knowledge as a public and private good emerges to better articulate the discussion on globalization, privatization and choice, which have been at the forefront of educational policy and reform in the past two decades. This sets the foundations to discuss policy design and implementation, and the role of agents in both processes. Issues of educational quality, equity, efficiency, accountability, and planning will be discussed, focusing on many realities across the world. Assessment: 100% coursework.
MEDD6099  Education for sustainable development (6 credits)

This course examines education for sustainable development (ESD) from a comparative perspective. First, the course raises the question what sustainable development means in practice within economic, environmental, political and cultural domains, and traces the history of the concept. Next, the course considers education for sustainable development within developed and developing contexts. In Hong Kong and many other high-income societies, education for sustainable development is often related to environmental education, but in low-income contexts (especially in Africa and Asia) it commonly refers to education that meets local social needs and is supported at the local level. A gap can sometimes be identified in these latter contexts, between “education for sustainable development” as a global reform concept, versus “sustainable educational development,” from a local perspective. In this course, students will analyse a variety of case studies in education for sustainable development, to understand the ways in which concepts may be developed and applied in a range of contexts.
Assessment: 100% coursework.

4. CURRICULUM AND PEDAGOGY

This specialism aims to develop an advanced (appropriate to Masters level) understanding of the curriculum field. Specifically, students will follow core courses that explore concepts and theories in the areas of curriculum conceptions and design, learning and pedagogy, curriculum policy and practice, and curriculum implementation.

MEDD6128  Curriculum conceptions and design (6 credits)

This course aims to familiarize students with the field of curriculum and to identify some of its main theoretical perspectives and enduring issues. It introduces students to the main conceptions of curriculum and to the various ways these conceptions are categorized. It examines critically the basic tenets of these conceptions and explores their implications for curriculum analysis and design.
Assessment: 100% coursework.

MEDD6131  Comparative perspectives on curriculum (6 credits)

This course offers a comparative survey of different approaches to curriculum around the world while asking the question of how globalization is impacting curriculum worldwide via reforms of curriculum and assessment in diverse world regions. Critical historical and comparative perspectives on curriculum are developed through analysis of curriculum content and curriculum reform processes in different countries and world regions. The question will also be considered of how globalization impacts Hong Kong curriculum.
Assessment: 100% coursework.

MEDD8819  Linking curriculum to learning and pedagogy (6 credits)

The course shows how more powerful ideas, more powerful educational practices and more powerful research methods can be developed by means of underlining the mutual dependence between learning and teaching, theory and practice, collective and individual, ideas and acts. It then critically reviews the role of learning and pedagogy and evaluates trends that are occurring in both areas globally and in Hong Kong.
Assessment: 100% coursework.

MEDD8820  Curriculum implementation: Issues and challenges (6 credits)

This course aims at developing the understanding of teaching professionals in the area of curriculum implementation through a critical examination of the processes and stages of curriculum implementation. It specifically provides a critical analysis of the factors that influence curriculum implementation and examines the issues involved in curriculum implementation from multiple perspectives, such as cultural, legal and ethical perspectives.
5. DESIGNING POWERFUL LEARNING ENVIRONMENTS

The goal of this specialism is intended to provide a strong foundation in the learning sciences for teachers and other educational professionals. The learning sciences focus on the intersection of three aspects of education: (a) theories and evidence about how students learn; (b) educational contexts (e.g. classrooms, museums, tutoring centers); and (c) technologies (in a broad sense—computer-based technologies, but also curriculum materials, and simple materials). The “educational context” in Hong Kong always includes a teaching subject (e.g. Liberal Studies or Biology) and the various elements of 21st century learning promoted by recent curriculum reforms (e.g. learning how to learn, inquiry-based learning, project-based learning). Students will learn to think about learning in all three of these dimensions, and learn to design and evaluate learning environments. The specialism starts with a foundational course to introduce the learning sciences in the first semester, which is followed by a course on learning in the disciplines in Semester 2, which examines specific examples in different teaching subjects. The third course is on knowledge building, the most prominent work in the learning sciences at HKU. Finally, since no serious consideration of learning can be undertaken without becoming critically aware of the role of educational technology, this is addressed by the fourth core course.

MEDD6201 The sciences of learning (6 credits)

This course is foundational to the specialism. We will discuss the origins of the field of the learning sciences, important research on learning (e.g. conceptual change, epistemic change, motivation), and major perspectives, including problem-based learning, argumentation, project-based learning, and collaborative learning.
Assessment: 100% coursework.

MEDD6202 Learning in the disciplines (6 credits)

This course examines learning in the disciplines (school subjects), especially Science, Mathematics, General Studies, and Liberal Studies. The module will be run using a combination of lectures and student-run workshops. The module has 3 overarching aims: (1) Digging into research a sciences of learning focus in the student’s own teaching subject; (2) Turning this research into practice; and (3) self-assessing and reflecting on learning relevant to one’s own teaching.
Assessment: 100% coursework.

MEDD6203 Learning and teaching with technology (6 credits)

The course aims to provide students with foundation to their understanding of information technology in education through: (1) Exploration of current and emerging technologies and their integration in teaching and learning: learning with and learning from technology, curricular, cross-curricular and extra-curricular integration of technology, teachers’ uses of technology tools, students’ uses of technology tools, learning management platforms, Web 2 and other emerging tools and paradigms, technology across an educational institution and evaluation of technology implementation. (2) Engagement in practical activities of using technology: engagement in on-line learning activities, presentation of ideas in variety of digital media formats, using modern technology tools and platforms to support teaching and learning, and development of an e-portfolio.
Assessment: 100% coursework.

MEDD7108 Fostering 21st century skills with knowledge building (6 credits)

This course provides a thorough introduction to an educational approach that can be used to address many current requirements of the Hong Kong school curriculum, including learning to learn, inquiry-based learning, reading to learn, assessment for learning, and the use of ICT. We examine the theory as well as current classroom practice, drawing from local and international examples. The course
will allow students to explore how to use ICT to support learning and to empower their own students to have more control over the learning process.

Assessment: 100% coursework.

6. EARLY CHILDHOOD EDUCATION

The specialism aims to provide participants with the knowledge, skills, and attitudes to implement high quality and contextually appropriate early childhood education. Specifically, the specialism will help participants acquire scientifically-based knowledge about early childhood development and education, develop a deeper understanding of contextual influences on children’s development and learning, and further develop their professional competence in planning, implementing and evaluating programmes of early childhood education and care. Participants will also be encouraged to access to the most recent international knowledge in the field.

MEDD6141 Promoting child development in early childhood education (6 credits)

This course will consider approaches to understanding and facilitating physical, cognitive and socio-emotional development in young children. It will consider influences on social development in early childhood and examine the applications of theories of cognitive and language development in early childhood education. The course will also focus on ways to promote (1) social competence, self-esteem and self-control in the preschool environment; (2) cognitive development; (3) the acquisition of pre-reading, writing and mathematical skills; and (4) second language acquisition.

Assessment: 100% coursework.

MEDD6142 Learning and teaching in early childhood education (6 credits)

This course considers how theoretical approaches and sociocontextual factors have shaped approaches to early childhood education. Curriculum models adopted in early childhood programmes in different countries will be critically evaluated. The course will also consider (1) curriculum design, planning, implementation and evaluation; and (2) the influence of recent research and the educational reforms on learning and teaching.

Assessment: 100% coursework.

MEDD6143 Planning, management, evaluation and leadership in early childhood education (6 credits)

This course provides an overview of how to plan, implement and evaluate early childhood programmes. Specific topics include: the development and review of programmes; financial management; staff development and appraisal; leadership, the development of effective communication strategies for working with other adults; and advocacy for children. Case studies based on the local context will be used throughout the course and the impact of the educational reform on the administration and management of early childhood programmes will also be considered.

Assessment: 100% coursework.

MEDD6144 Contemporary issues in early childhood education (6 credits)

This course considers the critical issues in early childhood education across a broad range of contexts, using multiple methodologies and perspectives including postmodernism and ecological system theories. Most of the contemporary issues in the field, locally, nationally, regionally, and internationally, will be critically evaluated. The course will cover (1) developing, implementing and assessing the early childhood education policies; (2) reconceptualisation of early childhood development and education; and (3) innovations and developmental trends in early childhood education.

Assessment: 100% coursework.
7. EDUCATION AND SOCIETY IN CHINA

This specialism aims to provide participants with sociological theories, contextual knowledge, and analytical skills to understand and analyze educational issues in China. The goal of the specialism is to cultivate in the participants the ability to make critical analysis on the influence of social, cultural, political, and economic forces on education in China. Specifically, participants will learn the four fundamental sociological traditions, acquire a comprehensive knowledge about education in China, and engage in in-depth analysis on one or more focused issues. The specialism will help students to understand China in the global context and to distinguish the unique Chinese characteristics in its educational development.

MEDD8802 Sociology of education: Classic and contemporary theories (6 credits)

This course examines sociological theories, both classic and contemporary, in Western and the Chinese contexts for the study of educational institutions and systems. The main objective of this course is to provide a disciplinary grounding to students in the sociology of education. The course includes an examination and application of the main sociological concepts in various cultural and social contexts. The ultimate aim is to employ the sociology of education to strengthen conceptual skills for research development of students. Case studies from Hong Kong, Mainland China, and other countries in Asia will be used to discuss how to adapt both concepts and methods to sociological research in education. In sum, this course offers an overview of the fundamental sociological concepts that can guide the analysis of specific educational issues in China.
Assessment: 100% coursework.

MEDD8803 Contemporary issues in education in China (6 credits)

The course seeks to critically examine contemporary, critical issues in education in China by using theories of sociology and development and situating the analysis in both Chinese and international contexts. Topics can include: educational access and equity; quality of education and curriculum reform in a global age; economy, migration and education; citizenship education for creating obedient citizens or free and autonomous persons; multiculturalism, ethnic diversity and national solidarity; and the pursuit of world class universities, institutional autonomy, and academic freedom.
Assessment: 100% coursework.

MEDD8821 China’s universities: Balancing domestic demands and global aspirations (6 credits)

The course examines how higher education is shaped by a shifting market of demands from three sectors of the population. First, there is the demand for knowledge and skills for jobs, not only by Chinese households, but also by employers who demand talented hires to drive innovation for competition in goods and services. Second, there is the demand for status culture by an expanding urban middle class that uses higher education to transmit their social position to their children. Third, there is the demand by the state for political stability. The course examines how each of these three demands takes precedence in different circumstances and at different times in the evolution of higher education in China. This market of demands approach is used to better explain the unintended consequences -- a growing dissatisfaction with widening inequalities and a serious concern about the quality of university teaching and research for upgrading the economy and stabilizing society, during the transition from elite to mass higher education.
Assessment: 100% coursework.

MEDD8822 Chinese educational traditions and their modern transformation (6 credits)

China’s educational heritage is rich. Yet, few people from Chinese societies can articulate the relevance of Chinese classical educational values. Since the West came to China with immense prestige during the late Qing dynasty, China’s educational traditions have been packaged poorly in light of
Westernization. This becomes increasingly inappropriate against a backdrop of a rising China. Integrating Chinese and Western ideas is urgently needed. Based on the vast range of literature in classical and contemporary Chinese and English across historical periods, this course explores how China’s rich educational heritage has been interpreted differently in the Western and Chinese literature. It attempts to sort out what are the fundamental features of Chinese traditional education, and investigates whether or not and how such traditions inform China’s contemporary educational policy and practice. It aims to equip students to position themselves at the interface of Chinese and Western traditions in education.

Assessment: 100% coursework.

8. EDUCATIONAL ADMINISTRATION AND MANAGEMENT

This specialism provides educators with the theoretical background and research capacity to understand and analyse the practice of administration and management in education. It covers: organization and management theories; school-based management, and educational leadership, legal aspects of educational management, and research methodology in educational administration. Other related topics include educational decision and policy making; and quality assurance and accountability in education.

MEDD6192 Educational leadership and school management (6 credits)

This course traces the recent development of leadership theory in education in order to explore what it really means to build an effective school of tomorrow, and what types of leadership would be most adequate for this enormous task. The course has integrated a comparative perspective, and looks into case-studies and findings from Asia Pacific, Australia, Europe and North America. The participants will explore the latest themes in leadership theories and will examine differentials in cultures, values, intelligences, and styles. The course will focus on approaches to school leadership that promote high quality learning environment and student learning achievement. However, the course will draw on examples from both educational and non-educational settings to relate theories to practice. There will be an opportunity for students to share their own experiences by contributing to group discussions and presentations.

Assessment: 100% coursework.

MEDD6193 Concepts and issues in school based management (6 credits)

This course provides a systematic study of the theory and practice of School-Based Management (SBM), its background and its major features. Within the SBM framework, topics to be covered will include organizational structures, proposed leadership models and leadership training, data on learning outcomes, preferred funding models, models of school planning, implementation and evaluation, and quality assurance. Particular emphases will be placed in the area of staff development and appraisal. Related theories, concepts, skills and strategies will be studied and the relationship between staff development and appraisal, with special reference to the implications for school effectiveness and educational change, will be closely examined.

Assessment: 100% coursework.

MEDD6195 Administrative and organizational theory for educational institutions (6 credits)

This course will trace the evolution of administrative and organizational theories, from classical to contemporary schools of thought, in the context of educational institutions. It will enable students to conceptualize and analyze organizational phenomena from various perspectives, including classical, human resource, systems, political, cultural, critical and postmodern schools of thought. Particular attention will be given to the application of these ideas to leadership and organizational learning, change and effectiveness.

Assessment: 100% coursework.
MEDD7100  Legal aspects of educational administration  (6 credits)

The course aims to better equip students with the necessary legal literacy, concepts and reasoning so that they would be able to understand legal aspects of educational administration, to critically examine their relevance and implications for effective running of the school, and to make decisions and perform administrative duties effectively within the confines of the law. The content covers basic legal concepts and system of laws, employment related issues, student rights and discipline, school liabilities and insurance matters, copyright and intellectual properties, administrator’s tort liability for negligence, dealing with law enforcing agents, etc.
Assessment: 100% coursework.

9.  ENGLISH LANGUAGE EDUCATION

This specialism aims to provide experienced teachers and language specialists with an appropriate theory-based framework within which to understand and investigate issues involved in English language education, in order that they can develop leadership roles in the profession. The specialism focuses on the development of participants’ language awareness, with a view to equipping them with the expertise necessary for a critical understanding of approaches to research and development in English language teaching and learning. The specialism also develops the practical skills needed for school-based classroom research, curriculum development and the implementation of innovations.

MEDD6311  English language curriculum and assessment  (6 credits)

This course is concerned with developments in the English Language curriculum, both in the Hong Kong context and also in relation to regional and global trends. The course focuses on processes of curriculum renewal and the implementation of curriculum innovations, and examines assessment as an integral part of the curriculum, along with syllabus and methodology. The main topics covered include: trends in ELT methodology (communicative language teaching, task-based language teaching, the incorporation of literature and language arts); assessment and the curriculum, including washback, formative assessment and school-based assessment. These developments are analysed within a framework of curriculum innovation and educational change. All of these are considered in relation to Hong Kong curriculum reforms, such as the New Senior Secondary curriculum. The course aims to develop participants’ understanding of the key developments and innovations in the English Language curriculum, both in the Hong Kong context and also in relation to regional and global trends.
Assessment: 100% coursework.

MEDD6702  Language awareness: Grammar and lexis  (6 credits)

This course focuses on the interface between teachers’ knowledge about language (specifically grammar and lexis) and their pedagogical practice. It is concerned with descriptions of English grammar and lexis and their close interrelationship. Rather than attempting an overview of English grammar and lexis, the course highlights certain key areas for in-depth exploration. The course aims to act as a catalyst to promote improvement in participants’ knowledge about grammar and lexis, since this is seen as essential to their work as English language educators. At the same time, it invites participants to consider the impact of their knowledge about grammar and lexis on the decisions they make and the strategies they employ in their teaching.
Assessment: 100% coursework.

MEDD6703  Second language acquisition  (6 credits)

This course aims to develop participants’ critical understanding of the key issues in second language acquisition. It seeks to engage them in understanding and reviewing these issues from a range of perspectives including the psycholinguistic, sociocultural and critical aspects. Participants are also required to apply these theoretical perspectives to their own experiences as second language learners.
and teachers. Both theoretical and pedagogical issues will be addressed through an analysis of authentic evidence of second language learning reported locally and internationally. Participants will also be introduced to current debates in the field, in particular the influence of first language and culture, the relationship between language and cognition, as well as the role of input, instruction, interaction, motivation and learning strategies in second and bilingual language development. The course will also address the broader socio-political context of second language learning and language policy development in Hong Kong and internationally, including such controversial questions as "native" speakerhood, use of the mother tongue in second language learning, and medium of instruction.

Assessment: 100% coursework.

**MEDD6709 An introduction to sociolinguistics (6 credits)**

This course provides opportunities for candidates to explore the relationships between language, education and society. It addresses a variety of topics including social and regional diversity within a language, multilingualism, language shift and maintenance, the rise of English as a global lingua franca, language planning, choice of a language as medium of instruction, as well as language and identity. The course aims to help candidates to develop an understanding of basic concepts in sociolinguistics; a critical understanding of the roles of language in society and education; a critical awareness of professional challenges resulting from shifting sociolinguistic conditions.

Assessment: 100% coursework.

---

**10. ENGLISH LANGUAGE STUDIES**

The specialism aims to provide English language teachers with approved subject knowledge training appropriate to the postgraduate level. The specialism focuses in particular on the development of participants’ knowledge about various aspects of the English language system, including phonology, grammar, lexis and discourse, as well as second language acquisition and literature and language arts in English, with a view to equipping participants with the knowledge and expertise necessary for high-level teaching in the English language field.

Candidates are required to complete all 4 specialist courses and 3 of the specialist elective courses. Those elective courses, however, may not necessarily be offered every year.

**Specialist Courses**

**MEDD6701 Phonetics and phonology for English language teaching (6 credits)**

This course introduces students to aspects of the English sound system most relevant to the teaching of English as a second language. It includes a systematic analysis of the features of the English phonological system, and how they are acquired and used in bilingual and multilingual contexts. Topics include the articulatory and auditory aspects of the English speech sounds and sound system covering both segmental and supra-segmental features, phonological rules and phonemic representations, phonological processes underlying speech acquisition and production, key differences between English and Cantonese phonology, and the phonology of English as an International Language. In addition, the role of phonology in interactional and strategic aspects of oral and written communication, and broader sociocultural issues concerning the pronunciation and accents of English language teachers will be examined. Pronunciation pedagogy and theory is explored with a particular focus on teaching pronunciation and phonological awareness in Hong Kong English language classrooms.

Assessment: 100% coursework.

**MEDD6702 Language awareness: Grammar and lexis (6 credits)**

This course focuses on the interface between teachers’ knowledge about language (specifically grammar and lexis) and their pedagogical practice. It is concerned with descriptions of English grammar and lexis and their close interrelationship. Rather than attempting an overview of English
grammar and lexis, the course highlights certain key areas for in-depth exploration. The course aims to act as a catalyst to promote improvement in participants’ knowledge about grammar and lexis, since this is seen as essential to their work as English language educators. At the same time, it invites participants to consider the impact of their knowledge about grammar and lexis on the decisions they make and the strategies they employ in their teaching.

**Assessment:** 100% coursework.

**MEDD6703 Second language acquisition (6 credits)**

This course aims to develop participants’ critical understanding of the key issues in second language acquisition. It seeks to engage them in understanding and reviewing these issues from a range of perspectives including the psycholinguistic, sociocultural and critical aspects. Participants are also required to apply these theoretical perspectives to their own experiences as second language learners and teachers. Both theoretical and pedagogical issues will be addressed through an analysis of authentic evidence of second language learning reported locally and internationally. Participants will also be introduced to current debates in the field, in particular the influence of first language and culture, the relationship between language and cognition, as well as the role of input, instruction, interaction, motivation and learning strategies in second and bilingual language development. The course will also address the broader socio-political context of second language learning and language policy development in Hong Kong and internationally, including such controversial questions as "native" speakerhood, use of the mother tongue in second language learning, and medium of instruction.

**Assessment:** 100% coursework.

**MEDD6709 An introduction to sociolinguistics (6 credits)**

This course provides opportunities for candidates to explore the relationships between language, education and society. It addresses a variety of topics including social and regional diversity within a language, multilingualism, language shift and maintenance, the rise of English as a global lingua franca, language planning, choice of a language as medium of instruction, as well as language and identity. The course aims to help candidates to develop an understanding of basic concepts in sociolinguistics; a critical understanding of the roles of language in society and education; a critical awareness of professional challenges resulting from shifting sociolinguistic conditions.

**Assessment:** 100% coursework.

**Specialist Elective Courses**

**MEDD6704 Literature and language arts in English (6 credits)**

This course focuses on the role of literature in the English Language/Language Arts curriculum and the issues related to using literature in the language classroom, including stories for children and adolescents. It also examines different literary genres (poetry, prose and drama) and the literary techniques associated with them and addresses the texts of mass media, film, hypertexts and hypermedia. It uses stylistic techniques to examine the way language is used creatively in literary texts and considers appropriate methodologies and strategies for teaching language through literature. The course aims to help students to develop an awareness of importance of creativity in English language learning and teaching and an understanding of the role of literature and the language arts in the language curriculum in different learning contexts. It also seeks to develop students’ understanding and appreciation of different literary genres (poetry, prose and drama) and the literary techniques associated with these as well as developing their understanding of issues relating to teaching language through literature including the design and evaluation of teaching materials, and cross cultural issues.

**Assessment:** 100% coursework.

**MEDD6705 Written discourse (6 credits)**

This course draws upon text-linguistic and genre-based approaches to inform the analysis, teaching and learning of written discourse in English language education. A range of topics will be covered, including: grammatical and lexical cohesion, coherence, text structure awareness, the analysis and teaching of various genres (narrative, informational, and promotional), genre-based pedagogy, and
critical reading of written texts. Through discussion of assigned readings, hands-on analysis of written
texts, and other learning activities, students are expected to develop analytical and practical skills which
will inform their teaching of English reading and writing in schools.
Assessment: 100% coursework.

**MEDD6706  Spoken discourse analysis (6 credits)**

This course aims at increasing students' understanding of how spoken language is used to communicate
meaning in different contexts. It introduces students to some of the main approaches to the description
and analysis of spoken discourse; it provides opportunities for participants to analyze naturally
occurring data using the analytical methods introduced. The course also seeks to relate theory with
practice in the classroom, although it is not a course in language teaching methodology. Participants
will explore how insights developed from the analysis of spoken discourse data can inform English
language teaching. After completing the course, students should be able to: (1) understand how people
make meaning and get things done through language in context; (2) use a variety of approaches to
describe and analyze spoken discourse with reference to meaning and use; and (3) assess and appreciate
the relevance of the study of spoken discourse for English language teaching.
Assessment: 100% coursework.

**MEDD6707  Reading in English as a second language (6 credits)**

This course focuses on the knowledge and skills involved in the teaching and learning of ESL reading.
Topics include reading as skills and strategies, top-down versus bottom-up processing, links between
first and second language literacy skills; issues in vocabulary learning, and innovative teaching
practices (e.g., strategy-oriented mini-lessons, and using inactive read-alouds). In the context of
learning English as a second or foreign language, this course aims to develop in the course participants:
(1) An understanding of the related theory and principles in ESL reading; (2) A critical understanding of
existing practices in teaching ESL reading and knowledge of innovative practices; and (3) An interest in
developing a possible topic for further investigation.
Assessment: 100% coursework.

11. HIGHER EDUCATION

This specialism will aim at developing theoretical and practical competences in the following four
areas: (1) Globalization and higher education; (2) Policy analysis; (3) Organizational change; and (4)
Academic roles and responsibilities. The conceptual framework in this course is built on theories and
practices developed by the international inquiries in the field of higher education over the last decades
and focuses on the most current ideas spearheaded by the processes of globalization, internationalization,
cross-cultural interactivity, academic freedom, institutional autonomy, problem-based learning, quality assurance, access and equity, and others. The field engages an
interdisciplinary perspective with major contributions from sociology, economics, political science,
administrative studies, and comparative education. The specialism explores policy, management,
curriculum development, teaching and learning issues developed and mitigated by various stakeholders
in higher education: i.e. international agencies, national governments, funding bodies, academic
associations, universities, polytechnics, community colleges, liberal arts colleges, research centers,
academic health science centers, branch campuses, joint educational ventures as well as individual
households. Special attention is given to the roles played by flagship universities in stimulating
excellence standards and urging reforms in higher education systems across various jurisdictions.

**MEDD6341  Globalization and higher education (6 credits)**

The concept of globalization has been taken as a salient feature of our times. Within a context of
intensified globalization, universities worldwide now encounter far greater challenges, and are
subjected to an unprecedented level of external scrutiny. The change in governance ideology in the
higher education sector has altered the way in which universities are managed. Higher education
institutions everywhere are subject to global trends that link higher education systems globally, with the
potential for creating severe problems for higher education in smaller or poorer nations in a world
divided into centers and peripheries, and leading to exacerbated dramatic inequalities among the world’s universities. This course will provide critical analysis of major policy issues including the growing commercialization of higher education and the values of the marketplace, the increasingly freely traded ‘knowledge products’ in the international marketplace, and the erosion of the university as an intellectual institution. This course aims to assist students to discuss these issues in an international and historical context, with particular foci on policy, governance and management. It examines how universities are responding to globalization in their cultural complexity and social contexts, using examples from a variety of social, cultural, economic and political backgrounds

Assessment: 100% coursework.

MEDD6346 Organizational theories and strategies in higher education (6 credits)

Organizational frameworks in higher education are different from those in businesses, governmental institutions or civic organizations. Strategic planning, key performance indicators and funding schemes differ across academic divisions. The university governance is driven by multi-layered coordination of executive, legislative, consultative and evaluative structures and mechanisms that are increasingly challenged by competition for resources and scientific impact. This course examines how the organizational structures emerged and transformed in the process of moving from elite to mass higher education contexts. The students will study organizational theories and strategies to understand the growing interdependencies among governance, finance, infrastructures, epistemic norms and organizational culture in universities and colleges. The proposed module aims at: (1) fostering strategic thinking for organizational development; (2) conducting critical analysis of management and planning approaches in public and private higher education institutions; (3) shaping skills in facilitative and integrative transformative frameworks. The students will examine key tensions between centralized and decentralized approaches, open and closed systems, structuralism and creativity, contingency and sustainability, diffusion and connectivity – while drawing on institutional strategic plans.

Assessment: 100% coursework.

MEDD6347 Comparative higher education policy studies (6 credits)

This course examines key themes and issues in comparative higher education policy studies including (1) system design; (2) access and equity, (3) quality assurance and accountability, (4) privatization and financing, (5) teaching, learning and student experience; (6) knowledge development, critical inquiry and innovation; (7) ITC and distance learning; (8) autonomy, governance and management. Students will have opportunity to develop policy analysis skills by examining trends and problems in these areas in various jurisdictions: e.g., Canada, China, EU, the former Soviet Union republics, UK and USA. The students will be learning by doing comparative research that engages a multi-stakeholder analysis of at least two systems, two universities, and life-stories of academics and students from those jurisdictions and institutions.

Assessment: 100% coursework.

MEDD6348 Higher education leadership (6 credits)

This course traces the recent development of leadership theory in higher education in order to explore what it really means to create and lead an effective academic team, research center, academic department, college, or university. The course examines the types of leadership that have been practiced in various academic institutions. The course pays a particular attention to the role of leadership in changing academic profession. The course has integrated a comparative perspective, and looks into case-studies and findings from universities in China, Australia, Europe and North America. The participants will explore differentials in cultures, values, intelligences, and styles of leadership across those contexts. The course will help students with various leadership experiences understand how a knowledge-driven institution engages various levels of responsibility and creates opportunities for shared visions, missions, and outcomes. This course draws on examples from both educational and non-educational settings to relate theories to practice in higher education, and indicate how leadership in higher education differs from those at other levels of education (e.g., early childhood, primary or secondary). Students will develop their own leadership profiles and will have an opportunity to share their own experiences by contributing to group discussions and presentations.

Assessment: 100% coursework.
12. LANGUAGE ACROSS THE CURRICULUM

This specialism is designed for content teachers who are directly involved in English medium (EMI) teaching as well as English language teachers who are involved in supporting EMI content teaching in their schools. It aims to provide both content and language teachers with the linguistic principles and knowledge to develop and implement language across the curriculum (LAC) initiatives in their schools to improve both English academic literacy instruction and EMI content instruction.

MEDD6316 Academic literacy in science and mathematics (6 credits)

This course focuses on raising both content teachers and English teachers’ academic language awareness. Specifically it aims to introduce teachers to the different kinds of academic genres (text types) specific to the disciplines of science and mathematics. The grammatical and lexical features specific to these academic text types are systematically analysed. The ultimate aim is to equip teachers and educators with the knowledge and skills to identify and describe the different kinds of language demands and cognitive demands of the academic texts and tasks in the disciplines of sciences and mathematics and to develop and design language support to assist their students to learn academic content in English.

Assessment: 100% coursework.

MEDD6317 Academic literacy in the social sciences and humanities (6 credits)

This course focuses on raising both content teachers and English teachers’ academic language awareness. Specifically it aims to introduce teachers to the different kinds of academic text types specific to the social sciences and humanities. The grammatical and lexical features specific to these academic text types are systematically analysed. The ultimate aim is to equip teachers and educators with the knowledge and skills to identify and describe the different kinds of language demands of the academic tasks in the social sciences and humanities, and to develop and design language support to assist their students to learn academic content in English.

Assessment: 100% coursework.

MEDD6318 Bridging pedagogy in school-based language across the curriculum (6 credits)

This course focuses on introducing the principles and practice of bridging pedagogical approaches that are designed to assist ESL/EFL learners to acquire the kind of academic literacy required of different academic disciplines. Specifically it aims to introduce to both content and language teachers the principles and practice of sociocultural scaffolding by making use of multi-media and multimodal resources and a range of linguistic bridging strategies.

Assessment: 100% coursework.

MEDD6319 Principles and practice of language across the curriculum (6 credits)

This course focuses on introducing the principles and practice of LAC. It covers the historical development of the field by discussing the principles and practice of different related approaches including: content-based instruction (CBI), and content and language integrated learning (CLIL). The different contexts in which these different approaches have developed will also be discussed with a view to adapting them to different new pedagogical contexts.

Assessment: 100% coursework.

13. MATHEMATICS EDUCATION

This specialism is designed for teachers and other educators directly involved with mathematics education. It aims to provide a comprehensive overview that will cover relevant research and contributions to the discipline from a variety of perspectives, namely the social and cultural context, teaching and learning, the curriculum, philosophy, and the impact of technology.
MEDD6387  Research into the teaching and learning of mathematics (6 credits)

This course gives an overview of theories and research on the teaching and learning of mathematics. Research in the teaching and learning of some major areas in mathematics such as algebra is reviewed. In addition, examples of investigation of mathematics teacher’s pedagogical content knowledge, teacher conception, and assessment related to the teaching and learning of mathematics, classroom research, small-scale and large-scale studies will be discussed. The course and assessment are designed in such a way for an introduction to a virtual experience of research culture for mathematics teachers and professionals. It is hoped that in the course the students will read, talk about, reflect upon how research may have an implication in their profession. They are expected to make presentations, plan their own research, and develop an awareness of how a research culture can be an enhancement of their life-long professional development. At the end of the course, students should be able to: (1) be aware of the issues and topics related to research in the teaching and learning of mathematics; (2) carry out literature review for specific issues of interest, reflect and discuss in relation to the local context and their workplace; (3) write a research proposal for school-based development for the mathematics teaching and learning.
Assessment: 100% coursework.

MEDD6388  Curriculum research and development in mathematics (6 credits)

This course discusses issues that revolve around the mathematics curriculum and its development in schools. Without limiting the discussion to Hong Kong, a deeper understanding of the issues and concepts concerned with curriculum research and development is expected to be emerging from a better knowledge about the mathematics curricula in various other countries. Important issues to be discussed include: the ongoing development of curriculum in mathematics; current mathematics curriculum projects overseas; the history of the mathematics curriculum; forces that shape the mathematics curriculum in Hong Kong; the relevance of school mathematics; mathematics across the curriculum; assessment in mathematics; school mathematics that caters for individual differences; and diversification and standardization of the mathematics curriculum.
Assessment: 100% coursework.

MEDD6389  The philosophical, social and cultural aspects of mathematics education (6 credits)

This course focuses on the features that characterize mathematics as a distinctive discipline. It explores the relationship between the nature of the discipline, the aims of mathematics education, and the nature of mathematics teaching and learning. The effect on teachers’ and students’ beliefs and attitudes, and on students’ achievement will also be discussed. In addition, this course investigates the social and cultural factors that affect the teaching and learning of mathematics. This includes international comparisons of socio-cultural differences; ethnomathematics from anthropological and utilitarian perspectives; social inequalities including gender issues; and the relationship between language and mathematics. The objectives of the course are to enable students to (1) reflect critically on the features that characterize mathematics as a distinctive discipline, and be aware of the conflicting views on the nature of mathematical knowledge, (2) explore the relationship between the nature of mathematics and the nature of mathematics teaching and learning, (3) explore the social and cultural factors that affect the teaching and learning of mathematics, (4) reflect upon the aims of mathematics education and how mathematics instruction should be conducted, and (5) reflect critically on how teachers’ views of mathematics and mathematics education affect their own practice.
Assessment: 100% coursework.

MEDD6390  Innovation and development of instructional design in mathematics (6 credits)

This course focuses on research and development of educational design in mathematics. By analysing cases of pedagogical practice and innovation, students will understand and reflect on principles and theoretical frameworks guiding the process of developing mathematics pedagogy. There will be study of task design, involving different tools and representations, situated in various contexts of mathematics learning, from the perspectives of teachers, designers and researchers. Special attention will be given to
the role of digital technology in shaping the goals and means of developing mathematics instructions and building learning environments.
Assessment: 100% coursework.

14. TEACHING AND LEARNING CHINESE LANGUAGE

The specialism is designed for in-service teachers, aspiring school middle-managers, curriculum coordinators and related professionals with regards to Chinese language education in Singapore. It aims to enhance learners’ leadership in curriculum planning and implementation, to advance learners’ professional knowledge in emerging pedagogies, to develop learners into reflective practitioners and effective facilitators of learning, and to lead change in curriculum design and pedagogical practice. This specialism also aims to promote research relevant to Chinese language education in Singapore.

MEDD6080 Chinese language assessment: From principles to practices [華文課程評估] (6 credits)

This course introduces important concepts of formative and summative assessment, assessment of learning, assessment for learning, assessment as learning, and the relationship among these concepts. The course aims to foster understanding of principles of assessment and provide opportunity to explore practices on school-based assessment. Topics cover general needs assessment, formative and summative assessment, evaluation and feedback, assessment of knowledge, skills and attitudes, strategies of assessing different Chinese language abilities, Chinese language learning outcomes, software for assessment and evaluation, and latest Chinese language assessment development. Important assessment reform such as Hong Kong school-based assessment will also be discussed. Emphasis will also be placed on review and development of an effective assessment construct in Singapore context, including the recent assessment reform of assessing and evaluating viewing skills.
Assessment: 100% coursework.

MEDD8222 Chinese curriculum design [華文課程設計] (6 credits)

This course explores the relationship between curriculum, instructional materials, pedagogy and assessment. The course aims at fostering understanding of different curriculum models and the relationship of curriculum to society and students’ overall development and outcome. It incorporates notions of differentiated curriculum and assessment for Singapore Chinese education context. Topics cover general concepts and models of curriculum design, development of goals and objectives, educational strategies for different objectives and outcomes, needs and barriers to course implementation, general needs assessment, formative and summative assessment, evaluation and feedback, assessment of knowledge, skills, and attitudes. Emphasis will be placed on making cross-comparison of Chinese language syllabi from different territories, namely mainland China, Hong Kong, Taiwan and Singapore. Processes in developing an effective school-based curriculum in Singapore context will also be explored.
Assessment: 100% coursework.

MEDD8823 Psycholinguistics and its application to Chinese language learning 語言心理學與華文學習] (6 credits)

This course focuses on the psycholinguistic aspects of learning Chinese language in Asian contexts. It examines the acquisition of phonology, character recognition, lexis and syntax by exploring the psychological processes and strategies involved in Chinese language learning. Recent development in Chinese psycholinguistic research related to learning and instruction is included. Upon the completion of this course, students will understand the basic principles of psycholinguistics and apply the principles of psycholinguistics to the instruction and research of Chinese language learning.
Assessment: 100% coursework.
MEDD8824  Chinese linguistics and its application to Chinese language learning  [漢語語言學與華文學習] (6 credits)

Through synergizing theories of language structure and language pedagogy in Asian contexts, this course aims to achieve a theory-based approach to understanding the learners’ language and its implication on language learning. Discourse linguistic theories of Chinese language will be discussed to analyse social and cultural phenomenon, accounts of these phenomena are studied comparatively with other languages. Upon completion of this course, students will acquire a rich understanding of the structures of Chinese language as well as gain practical experience in empirical study of the learners’ language.

Assessment: 100% coursework.

Specialist Elective Courses

MEDD6076  Understanding learners and applying effective pedagogies  [因材施教之教學策略] (6 credits)

Having the learners in mind, this course aims to provide a wide range of approaches catering to the different learning needs as well as focus on effective teaching strategies for Singaporean students in learning Chinese. Second language acquisition theories, communicative approach, task-based approach and other important theories will be discussed in depth while specific teaching techniques pertaining to the various language modalities will be demonstrated and practiced in class. After attending the courses, students should build an awareness of the different learning needs of their learners, be equipped with the skills to diagnose and design effective lessons.

Assessment: 100% coursework

MEDD6078  Techniques and skills of applying information and communication technology in Chinese teaching  [資訊科技在華文教學中的應用] (6 credits)

Online learning opens up a promising yet challenging opportunity for education, and media literacy becomes an important aspect of teacher development. This course is for students to broaden their understanding of the advances in educational technology and to integrate emerging technologies into primary and secondary classrooms. Students will reflect on the role various forms of electronic and digital technology can play in the teaching and learning of Chinese in Singapore context and evaluate on the effectiveness of some of the many digital tools used in today's schools. For practicality purpose, the course will also illustrate the integration of educational technology with the Chinese curriculum and assessment in Singapore schools.

Assessment: 100% coursework

MEDD8825  Current issues in learning Chinese in Singapore context: Research findings and their application  [當前新加坡華文教學研究之發現及其應用] (6 credits)

The goals of this course are to help students develop a better understanding of the current issues faced in learning Chinese in the multi-lingual and multi-cultural Singapore context, as well as be exposed to the educational research outcomes in the recent years and engaged in in-depth discussion on their application. Topics to be addressed include investigation on sociolinguistics and psycholinguistics, evaluative studies on educational reforms and educational technologies in learning and teaching of Chinese language education in Singapore, classroom intervention studies ranging across various language modalities and developmental stages. With a focus on evidence-based findings, students will evaluate and take this further to answer the essential questions of ‘how does this inform learning and teaching’ and ‘what are the implications to the classrooms in practice’.

Assessment: 100% coursework

15.  TEACHING CHINESE AS A SECOND LANGUAGE  中文第二語言教學

This specialism is designed for pre-service or in-service Chinese language teachers in primary or secondary schools, who want to excel themselves to research and teach Chinese in various global
contexts, including teaching Chinese as a second or foreign language. The programme connects theory and practice, and focuses on the issues related to Chinese as a second language pedagogy, curriculum design, assessment and classroom research. The programme aims at developing qualified TCSL teachers who are versed in various international curricular, with a particular focus on the IB curriculum.

**MEDD6051 Teaching Chinese language in international contexts [對外漢語教學] (6 credits)**

The course provides a general overview of the major topics relating to second/foreign language education, focusing on the theory and pedagogy of teaching Chinese as a second/foreign language in the international contexts. It presents an overview of second language acquisition theories and second language pedagogy, and explores the issues around designing and supporting second language and culture learning experience in the classroom. Moreover, the course provides an overview of various levels of local curriculum in Hong Kong and international standards such as ACTFL standards and CEFR frameworks, making reference to the teaching of other curriculum, such as IB, AP, GCSE curriculum, including an analysis of the curriculum design, teaching methodologies, learners and learning resources, course assessment guidelines required for those curricula. It aims to help teachers make Chinese language teaching and learning maximally effective in Hong Kong and international contexts through an understanding of sound principles of language teaching and learning. In this course, we will begin with a brief overview of how people learn and how people learn a language grounded in cognitive and sociocultural approaches. Language teaching methods will be followed by focusing on specific skills such as oral and written communication modalities, as well as how to create learner-centered environments to foster independent and collaborative learning. We will then look at language teaching specifically from aspects of learning environment design, instruction, assessment and classroom management. The course aims to provide students with an understanding of issues related to teaching Chinese in the international context through: (1) Exploring second language acquisition theories and pedagogies; (2) Examining international curriculums such as IB, GCSE, AP; and (3) Discussing issues related to designing and managing Chinese language learning and teaching experience.

Assessment: 100% coursework.

**MEDD6052 Chinese (L2) assessment and reporting [中文第二語言教學評估與報告] (6 credits)**

This course focuses on the integral role of assessment and reporting for L2 Chinese learning and teaching in the international/IB school context. It will provide an overview of norm and criterion-based assessment and referencing, formative and summative assessment and the relationship between reporting, feedback and improved student learning. It will also introduce a range of assessment mechanisms, tools, reporting strategies and analyse their role in promoting assessment for learning. The course aims to develop participants’ theoretical and practical understanding of the principles of assessment of L2 Chinese learning, with an emphasis on assessment as a tool to promote student learning and support diverse learning needs. The course is expected to achieve the following objectives: (1) To enhance students’ understanding of the integral role of assessment and reporting for L2 Chinese learning and teaching; (2) To understand the key assessment and reporting requirements of the IB Programme; (3) To keep students up to date with the latest development of assessment and reporting in the field of teaching Chinese as a second language; (4) To enable students to develop effective assessment strategies and reporting mechanisms for learners of different age groups and learning objectives.

Assessment: 100% coursework.

**MEDD6054 Chinese (L2) school-based curriculum design [中文第二語言校本課程設計] (6 credits)**

This course will provides you with a systematic understanding of school curriculum design and lesson planning. In this course, we will explore IB curriculum at different programmes, and discuss the core of IB curriculum design -- concept-based curriculum. We will also discuss the various issues related to lesson planning. The course is very hands-on, where you will work in groups with your classmates to design curriculum together and critique each other’s unit and lesson design. Students are expected to (1)
understand concept-based curriculum design and be able to apply the understanding to design school-based curriculum; (2) work in groups to design and critique unit and lesson design. It is expected that students will engage in collaborative learning experience through actively contributing their opinions and helping each other along the learning process. The course has the following objectives in mind: (1) To equip students with the theoretical background about curriculum design and implementation; (2) To familiarize students with current foreign language curriculum design frameworks and models; (3) To familiarize students with IB curriculums and concept-based curriculum design; (4) To engage students in discussions about issues related to curriculum design and implementation.

Assessment: 100% coursework.

**MEDD6055 Research and teaching practice in second language classrooms [中文第二語言教學研究與實踐]** (6 credits)

In order to integrate knowledge with real school experience, this course provides opportunity for students with experience in the real second language classroom aside from getting to understand the theories on second language teaching and learning. The aim is to familiarize students with day-to-day teaching practice at international schools in Hong Kong, by engaging students in actual teaching at international schools in Hong Kong, to identify and tackle students’ learning difficulties. This course will be a strong theoretical and practical emphasis on the development of students' research and teaching ability on Chinese L2 teaching and learning in classrooms. During their school experience, student-teachers are required to identify their students’ learning difficulty; using appropriate theories to analyze it; design and conduct a small-scale action research with the application of suitable teaching strategies to deal with the identified learning difficulties. The student-teachers will conduct classroom observation, and compile a self-directed portfolio based on data collected and experience encountered in their action research. This portfolio contains a journal, lesson plans and teaching materials developed by the student-teachers during the practicum, self-reflections on lessons taught and feedback from the students. The module aims to provide students with an understanding of research methodology, and how to use educational research to support day-to-day teaching practice of Chinese as a second language: (1) Identify major issues and problems in day-to-day teaching practice of Chinese as a second language classrooms; (2) Demonstrate the ability to write a small-scale action research proposal with theoretical basis and application of pedagogies, to resolve identified major issues and problems in teaching of Chinese as a second language classrooms; (3) Demonstrate the ability to conduct research project, self-reflective practice and to report the research findings.

Assessment: 100% coursework.

**Specialist Elective Course**

**MEDD7104 Integrating IB philosophy into Chinese language teaching** (6 credits)

This elective includes an in-depth exploration into how to integrate IB DP philosophy in curriculum design, teaching and learning, assessment and research. Students will be guided on designing and refining Chinese language curriculum that reflects the overall IB DP philosophy and learner profile and at the same time aligns with the Chinese language curriculum guides. Students will also be engaged in exploring various pedagogies and technological tools to integrate IB philosophy and learner profiles in language and culture instruction. Students will explore TOK, CAS and Extended Essay and Chinese language education. Furthermore, the module will also enhance students’ understanding on how to reflect IB philosophy and learner profile in assessment design and how to design assessments that reflect IB subject matter specific assessment criteria. In this module, students will not only understand the integration of IB philosophy in various aspects of instruction, but also generate a series of research questions around the integration of IB philosophy in instruction.

Assessment: 100% coursework.
TEACHING OF MATHEMATICS IN AN INTERNATIONAL CONTEXT

This specialism is designed for researchers, educators and pre-service or in-service Mathematics teachers in primary or secondary schools, especially those from direct subsidy scheme schools, mainstream schools and international schools, who want to excel themselves to research and teach Mathematics in local as well as various global contexts. The programme caters for practitioners in the teaching of the mathematics curriculum in Hong Kong, making reference to the teaching of other curriculum, such as International Baccalaureate (IB), GCSE etc.

MEDD6381 Integrating IB philosophy into the teaching of Chinese language, mathematics and science (6 credits)

This elective course includes an in-depth exploration into how to integrate IB DP philosophy in curriculum design, teaching and learning, assessment and research. Students will be guided on designing and refining Chinese language/ Mathematics/Science curriculum that reflects the overall IB DP philosophy and learner profile and at the same time aligns with the Chinese language / Mathematics / Science curriculum guides. Students will also be engaged in exploring various pedagogies and technological tools to integrate IB philosophy and learner profiles in language and culture instruction. Students will explore TOK, CAS and Extended Essay and Chinese language/ Mathematics / Science education. Furthermore, the course will also enhance students’ understanding on how to reflect IB philosophy, cross-disciplinary application and learner profile in assessment design and how to design assessments that reflect IB subject matter specific assessment criteria. In this course, students will not only understand the integration of IB philosophy in various aspects of instruction, but also generate a series of research questions around the integration of IB philosophy in instruction.

Assessment: 100% coursework.

MEDD6382 Research and/or mathematics teaching practice in classrooms (6 credits)

In order to integrate knowledge with real school experience, this course provides opportunity for students with experience in application of IB Philosophy and mathematics teaching in classrooms aside from getting to understand the theories on mathematics teaching and learning. The aim is to familiarize students with day-to-day teaching practice at international minded schools in Hong Kong, by engaging students in actual teaching at international schools in Hong Kong, to identify and tackle students’ learning difficulties. This course will be a strong theoretical and practical emphasis on the development of students' research and teaching ability on mathematics teaching and learning in classrooms. During their school experience, student-teachers are required to identify their students’ learning difficulty; using appropriate theories to analyze it; design and conduct a small-scale action research with the application of suitable teaching strategies to deal with the identified learning difficulties. The student-teachers will conduct classroom observation, and compile a self-directed portfolio based on data collected and experience encountered in their action research. This portfolio contains a journal, lesson plans and teaching materials developed by the student-teachers during the practicum, self-reflections on lessons taught and feedback from the students. The course aims to provide students with an understanding of research methodology, and how to use educational research to support day-to-day teaching practice of Mathematics: (1) Identify major issues and problems in day-to-day teaching practice of mathematics classrooms; (2) Demonstrate the ability to write a small-scale action research proposal with theoretical basis and application of pedagogies, to resolve identified major issues and problems in Mathematics classrooms; (3) Demonstrate the ability to conduct research project, self-reflective practice and to report the research findings.

Assessment: 100% coursework.

MEDD6387 Research into the teaching and learning of mathematics (6 credits)

This course gives an overview of theories and research on the teaching and learning of mathematics. Research in the teaching and learning of some major areas in mathematics such as algebra is reviewed. In addition, examples of investigation of mathematics teacher’s pedagogical content knowledge, teacher conception, assessment related to the teaching and learning of mathematics, classroom research, small-scale and large-scale studies will be discussed. The course and assessment are designed
in such a way for an introduction to a virtual experience of research culture for mathematics teachers and professionals. It is hoped that in the course the students will read, talk about, reflect upon how research may have an implication in their profession. They are expected to make presentations, plan their own research, and develop an awareness of how a research culture can be an enhancement of their life-long professional development. At the end of the course, students should be able to (1) be aware of the issues and topics related to research in the teaching and learning of mathematics; (2) carry out literature review for specific issues of interest, reflect and discuss in relation to the local context and their workplace; (3) write a research proposal for school-based development for the mathematics teaching and learning. Assessment: 100% coursework.

**MEDD6389 The philosophical, social and cultural aspects of mathematics education (6 credits)**

This course focuses on the features that characterize mathematics as a distinctive discipline. It explores the relationship between the nature of the discipline, the aims of mathematics education, and the nature of mathematics teaching and learning. The effect on teachers’ and students’ beliefs and attitudes, and on students’ achievement will also be discussed. In addition, this course investigates the social and cultural factors that affect the teaching and learning of mathematics. This includes international comparisons of socio-cultural differences; ethnomathematics from anthropological and utilitarian perspectives; social inequalities including gender issues; and the relationship between language and mathematics. The objectives of the course are to enable students to (1) reflect critically on the features that characterize mathematics as a distinctive discipline, and be aware of the conflicting views on the nature of mathematical knowledge; (2) explore the relationship between the nature of mathematics and the nature of mathematics teaching and learning; (3) explore the social and cultural factors that affect the teaching and learning of mathematics; (4) reflect upon the aims of mathematics education and how mathematics instruction should be conducted, and (5) reflect critically on how teachers’ views of mathematics and mathematics education affect their own practice. Assessment: 100% coursework.

**Specialist Elective Courses**

**MEDD6388 Curriculum research and development in mathematics (6 credits)**

This course discusses issues that revolve around the mathematics curriculum and its development in schools. Without limiting the discussion to Hong Kong, a deeper understanding of the issues and concepts concerned with curriculum research and development is expected to be emerging from a better knowledge about the mathematics curricula in various other countries. Important issues to be discussed include: the ongoing development of curriculum in mathematics; current mathematics curriculum projects overseas; the history of the mathematics curriculum; forces that shape the mathematics curriculum in Hong Kong; the relevance of school mathematics; mathematics across the curriculum; assessment in mathematics; school mathematics that caters for individual differences; and diversification and standardization of the mathematics curriculum. Assessment: 100% coursework.

**MEDD6390 Innovation and development of instructional design in mathematics (6 credits)**

This course focuses on research and development of educational design in mathematics. By analysing cases of pedagogical practice and innovation, students will understand and reflect on principles and theoretical frameworks guiding the process of developing mathematics pedagogy. There will be study of task design, involving different tools and representations, situated in various contexts of mathematics learning, from the perspectives of teachers, designers and researchers. Special attention will be given to the role of digital technology in shaping the goals and means of developing mathematics instructions and building learning environments. Assessment: 100% coursework.
17. **YOUTH STUDIES**

Young people today are facing many challenges. They go through the turbulent years of adolescence and emerge into adulthood under much pressure. Many feel stuck, confused and alienated and do not feel to have the resources to move on resulting in frustration and failure. This specialism examines important issues, namely the power of media in youth’s lives, the society and culture influencing the development of youths, life education policy and curriculum, and the issue of education from an interdisciplinary and global perspective in theories and application. The first course looks at how the implementation of media literacy education can help students adapt to this new digital world of global village. The second course examines different theories, approaches and issues of life education for adolescents and youths. The third module looks at other factors in society, culture, and youth development to develop students’ talents, values and leadership skills to more effectively promote and sustain a democratic, equitable, and innovative society. The fourth course examines theories, models, practices, and issues of sex education policy and curriculum in Hong Kong and elsewhere. The study of the four courses do not just discuss issues affecting youths; more important, this specialism examines what could be done to empower them to go through life in the age of turbulence.

**MEDD7098 School policy and curriculum for sex education (6 credits)**

The course aims to help participants critically examine theories, models, practices, and issues of sex education policy and curriculum in Hong Kong and elsewhere. It also aims to help participants develop greater ability to equip their students with knowledge, skills and attitudes in two major aspects: (1) developing positive sexual identity and attitudes toward sexuality and sex, engaging in healthy dating and relationship as well as handling breakup meaningfully, and understand the importance of abstinence and safe and responsible sex; and (2) protection from casual sex, sexually transmitted diseases, unwanted pregnancy, abortion, sexual harassment and abuse, and abnormal relationships. The course also examines controversial issues such as pre-marital sex, cohabitation, homosexuality, psychology of taking nude photo/video, teacher-student love and professional integrity, and compensated dating and materialism. Real school cases in Hong Kong would be discussed in class. Assessment: 100% coursework.

**MEDD8661 Youth and media literacy (6 credits)**

Media is significant in the context of globalization and education reform where the emphasis is on adapting students in this new digital world of global village and enhancing students creativity in a the knowledge society. Research showed that young people under the age of 25 are the most active group for media usage. To empower youth with the understanding of media and its influences, the promotion of media literacy education in schools has become a worldwide movement in the past few decades. This module introduces students to the understanding of the development and implementation of media literacy education in various countries in general, and Hong Kong in particular, with respect to curriculum, policy, literacy, and learning. The role of media literacy education in moral and ethics education, civic education, as well as nurturing students’ creativity and critical thinking skills will be studied in depth. This course will help students to: (i) develop a general understanding of media literacy in the context of globalization and education reform; (ii) show focused mastery of knowledge of the development and implementation of media literacy in various countries in general, and Hong Kong in particular, and; (iii) empower youth in moral and ethics education, civic education, as well as nurturing students’ creativity and critical thinking skills through media literacy education. Assessment: 100% coursework.

**MEDD8665 Society, culture, and youth development (6 credits)**

The focus of this course is the interaction between people, societies, cultures, environments and time. This course prepares students to develop an understanding of the important factors influencing adolescents’ development and their perceptions of the world. This course draws on cross-disciplinary concepts from areas such as anthropology, cultural studies, psychology, history, and sociology. This course provides the knowledge related to the study of culture and society and youth development so that students may develop their talents, expertise, values and leadership skills to more effectively
promote and sustain a democratic, equitable, and innovative society.
Assessment: 100% coursework.

**MEDD8808  Life education for adolescents and young people (6 credits)**

In changing society, adolescents and young people are increasingly puzzled by the meaning of life. The early 21st century witnesses four major rising trends among adolescents and young people: bullying and violence, drug abuse, self-harm, and suicide. Society and schools are urged to help adolescents and young people to cope with these life problems. The course examines different theories, approaches and issues of life education for them. With particular reference to Hong Kong, it aims to help participants (1) review life education policy and curriculum; (2) examine phenomena and theories of physical and cyber bullying, self-harm, drug abuse, and teen and youth suicide; (3) equip their students with knowledge, skills and attitudes to confront these four problems; (4) develop measures to create a safe and caring learning place for adolescents and young people; and (5) promote life education programs to help them foster positive and healthy perspectives and good habits to cope with life. Real school cases in Hong Kong would be discussed in class.
Assessment: 100% coursework.

**GENERAL ELECTIVE COURSES**

Candidates, who are required to take general elective courses, can choose from a list of general elective courses which may not necessarily be offered every year:

**MEDD6344  Aims of higher education (6 credits)**

This course draws on aims of higher education from both historical and sociological perspectives. It will consider the development of different traditions of higher education, including liberal, civic and Humboldtian models, discuss aims of higher education in modern age, and explore how future university will look like. The aims of higher education in the modern age will be considered in the context of the changing nature of academic practice such as massification, technological advance, and globalization. Students will be asked to reflect on the ‘specialness’ of higher education in the contemporary world where the divide between post-secondary sectors in being eroded and community colleges and universities are merging in some national contexts. This course will also discuss controversial issues regarding aims of higher education across institutional types and educational levels. The main topics will include: the history of higher education; the re-shaping of aims in higher education by reference to contemporary trends; understanding the aims of modern universities via an analysis of mission statements; mission differentiation of higher education institutions; aims of higher education in undergraduate, postgraduate level, community college and new types of higher education institutions such as on-line university and for-profit institutions; and teaching, research, social engagement in modern university.
Assessment: 100% coursework.

**MEDD6443  Student development: Theory, research and practice (6 credits)**

Student development concerns the holistic development of a student – his/her psychological development, physical development, career interest development, emotional development, identity development, moral development, social development, as well as cognitive development. This course examines student development not only from a theoretical perspective but also from a practical perspective. It studies the main theories of and research on student development. Emphasis is further placed on how these theories and research findings can be applied to schools and universities in Hong Kong, mainland China, and beyond. Potential learners (e.g., in-service and pre-service teachers, counselors, and senior school managers; indeed, anyone who is interested in understanding students’ holistic development) should be interested in this course because it will equip the learners with
knowledge and skills needed not only for promoting the development of their students but also for achieving a better understanding of themselves.
Assessment: 100% coursework.

**MEDD7001  Psychology and education of the gifted and talented (6 credits)**

The course examines gifted education and the psychology of gifted and talented individuals. Content will include the following topics: understanding the gifted and talented, gifted education in Hong Kong and other parts of the world, gifted education and education reform, identification of the gifted and talented, multiple intelligences, psychological adjustment, guidance and counselling for the gifted, school-wide enrichment and provisions for talent development, curriculum models, parenting gifted and talented children, teaching for creativity, programme development and evaluation, gifted underachievers, gifted girls, and social development and moral leadership. Selected case studies and critical issues in implementing gifted programmes will be examined.
Assessment: 100% coursework.

**MEDD7007  School-based teacher development in Hong Kong and China (6 credits)**

Teacher development has become a hot issue in schools around the world. In Hong Kong and Mainland China, teachers are required to take around 50 hours of professional development per year. Despite the similarity in such a requirement, the practices of teacher development in the two systems are very different. School-based teacher development in Hong Kong is still in its infant stage whereas schools in Mainland China have already developed an advanced system consisting of a great variety of activities including teaching research, collective preparation of lessons, mentorship, peer observation, etc. This course compares the practices of school-based teacher development in the two systems. Their strengths and the weaknesses are to be examined and effectiveness be closely scrutinized. Special attention will be given to the implications of the practices in Mainland China for the improvement of our practices in Hong Kong. An OPTIONAL study trip to schools in either Shanghai or Guangzhou will be organized for participants to study the Mainland Chinese practices in action.
Assessment: 100% coursework.

**MEDD7013  Comparative education – Approaches, methods and themes (6 credits)**

This course provides a general introduction to the field of comparative education as a field of study. It pays particular attention to methodologies, which are illustrated through an issues-based approach. Similarities and differences between education systems in Hong Kong and in other parts of the world are assessed and discussed. Some of these locations are geographically close to us (e.g. Macao and mainland China), while others are more distant. Study through a comparative lens helps in understanding of the forces which shape education systems and processes. The course has been designed as a general introduction which can be taken as an elective by students from every specialism.
Assessment: 100% coursework.

**MEDD7029  Managing disruptive behavior in school (6 credits)**

This course is a comprehensive guide to the management of discipline in secondary schools. The goal of this program is to provide participants with knowledge and skills to become leaders of the field and to provide guidance to help participants develop their personal systems of behavior management. Different behavior management models will be described and assessed. Reflective case-based approach is used to analyze and evaluate the three Behavior Management Levels (i.e. individual, classroom and schoolwide).

Requirement: Teachers who have been involving in managing high school discipline or student guidance preferred.
MEDD7038  Counselling, career education and talent development in schools (6 credits)

This course will compare theories and practices of counselling, career education and talent development programmes in schools in Hong Kong and other parts of the world. Topics will include: life career perspective; comprehensive school guidance and counselling program; identification of students for talent development programmes; assessment of life career and talent development; individual development planning; student advisory and mentorship schemes; theories of career development; career awareness among children; career exploration among adolescents; career decision making among senior secondary school students and college students; career development of talented students and students with special needs; talent development in schools; theories of talent development; career counselling of the exceptionally gifted; family influences; multicultural perspective; gender issues; life-wide learning; career-related experiences; services learning; programme evaluation and enhancement. The course is relevant to all teachers and guidance personnel who wish to enhance students’ career and talent development through subject teaching and co-curricular activities. Case studies of good practice in Hong Kong and elsewhere will be introduced. Course participants are expected to work in collaborative learning groups to integrate practices and theories.
Assessment: 100% coursework.

MEDD7071  Educational decision-making - Theory and practice (6 credits)

The objective of this course is to introduce key concepts and theories concerning decision-making and policy-making at individual, organizational and system levels, mainly in the context of education. The process of decision and policy making is closely examined through various perspectives including rational, organizational, political, ethical and cultural. Emphasis will also be placed on the application of the concepts and theories to important educational decisions and policies. In order to broaden the perspective of students, senior administrators and officials will be invited from education, business and public sectors to share their experiences on decision and policy making in the class.
Assessment: 100% coursework.

MEDD7086  Chinese language teaching and learning in school-based contexts (6 credits)

The course focuses on school-based curriculum development in Chinese language as a powerful framework for the enhancement and organization of the varied and numerous experiences and learning needs of students and to encourage teachers to solve curriculum problems. It includes the curriculum development and change, planning and implementation, innovation and evaluation. This course will provide case studies of school-based Chinese language curriculum in Hong Kong context like enhancing creativity in Chinese writing, self-directed learning and non-native speakers learning Chinese. Students will reexamine the theoretical basis in light of the case studies and discusses current and future issues in school-based curriculum development.

Requirement: Students should know Cantonese and have experience in teaching Chinese language
Assessment: 100% coursework.

MEDD7102  Pedagogical frameworks for mathematics, science and related subjects (6 credits)

There are a variety of pedagogy and theories employed in studies for teaching and learning. This course aims to introduce frameworks, namely visualization, multiple representations and SOLO taxonomy to teachers so that they can appreciate pedagogical frameworks, apply them to their practice and enhance their critical evaluation of classroom teaching. During the course, examples from mathematics and science subjects will be used for illustration. It will cover: (1) Visualization in science and mathematics; (2) Understanding via the framework of dynamic multiple representations; (3) Structure of Observed
Learning Outcomes (SOLO) taxonomy for assessment, design of tasks and analysis of outcomes; (4) Analysis of lessons from a researcher’s perspective.
Assessment: 100% coursework.

MEDD7113 Learning to notice: Towards effective teaching and quality classroom research (6 credits)

This course introduces the concepts and theories underlying the various practices that have been found to be effective on improving teachers’ abilities to notice and interpret important events that are happening in their classrooms through watching and analyzing authentic classroom videos. Theories and concepts will be illustrated through real examples of classroom videos. Teachers who want to improve their own teaching and research students who need to carry out classroom observations for their study will find this course useful in sharpening their abilities to notice subtle, and yet important features of classroom events.
Assessment: 100% coursework.

MEDD7116 Effective teaching of mathematics, science and liberal studies for English language teachers (6 credits)

This course aims to promote understanding of the nature and forms of languages of Mathematics, Science and Liberal Studies, as well as the awareness of the issues pertaining to the role of academic languages in the three disciplines. This course will be useful for teaching students who use English as a second language, that is, the English Language Learners. It is designed for teachers teaching the three subjects and those who wish to enhance their understanding of language issues and policies. This course will begin with a highlight of the importance of languages in teaching and learning the three subjects. Issues such as the nature and forms of languages will be explored. The course will introduce some strategies that enhance students' reading, writing and verbal communication in teaching Mathematics, Science and Liberal Studies. Challenges of learning and teaching the three disciplines with a second language will be addressed. Examples will be drawn from the primary to secondary school levels. The local policy of Medium of Instruction will be scrutinized in the light of experiences from different parts of the world.
Assessment: 100% coursework.

MEDD7117 Drama appreciation and teaching (6 credits)

The course provides students with the opportunity to appreciate classic Western drama and modern Chinese plays. It aims to familiarize students with the key concepts of drama such as themes, characters, actions, the art of language, and the underlying cultural meaning. Students will compare related works and seek to understand the main schools in dramatic history. The course also explores theories of drama developed from the West, for example imitation, the concept behind tragedy and comedy, dramatic structure, and the art of the theatre as an aesthetic experience. Another crucial element of this course is the teaching of drama. This course encourages critical engagement and creation in drama learning. Students will enhance their learning and pedagogy by practicing useful skills such as table-read, stage performance, dramatic strategies, monologue, comparative reading, playwriting, and adaptation. By taking this course, learners will be equipped with the knowledge to teach electives “Appreciation of Drama Literature” and “Drama Workshop” in the NSS Chinese curriculum, as well as language and literature classes in primary schools. Teachers can also transfer the approaches to educational drama into their teaching and learning of other subject areas, such as History, Liberal Studies, and Civic Education, for greater learning motivation and more in-depth understanding of the topics.
Assessment: 100% coursework.
MEDD7122  Assessment of young exceptional children: Issues and trend (6 credits)

Assessment is the cornerstone of instructional practices and curriculum development in early childhood special education. Education professionals working with infants, toddlers, and children with diverse learning needs from different backgrounds (hereafter “young exceptional children”) must be prepared with the knowledge and skills to understand the issues and trend of assessing young children and their families, identify the adequacy of assessment instruments and procedures, and use the information for multiple purposes (e.g., developing instructional programs, monitoring progress). The purpose of this course is to provide an overview of recommended assessment practices in early childhood special education, with an emphasis in children aged from birth to eight and their families. Student will learn the issues and trend in assessing young exceptional children through class activities and current literature and research. Students will gain knowledge of a variety of approaches to assessment and master skills in administering assessment and interpreting information from testing and observation for the purpose of planning intervention. The limitations of selected assessment practices and issues of interpretation inherent to early childhood will be addressed. Attention will also be paid to the significant role of families in the assessment process.

Requirement: Students who take this course are recommended to have prior working experience with children from birth to 8 or have taken course related to child development.

Assessment: 100% coursework.

MEDD7124  Individual and home predictors of students’ academic achievement (6 credits)

This course examines the research to-date on key student and home influences on academic achievement. The design of the course is premised on the philosophy that educators should be conversant with the state-of-the-art scientific knowledge on what really matters in affecting student learning and achievement, and be able to critically evaluate and leverage on the different sources of influences to complement their teaching in the school. The student-level psychological predictors that will be discussed in the course include intelligence, prior achievement, attitudes and dispositions. The home-level predictors to be examined will include socioeconomic status, family structure, home environment, and parental involvement. Throughout the course, course participants will be acquainted with results of published meta-analyses interrogating how these variables predicted student achievement.

Assessment: 100% coursework.

MEDD7125  Learning how to learn: Understanding and fostering student learning (6 credits)

This course aims to familiarize class members with theories and principles of how students learn with a focus on learning how to learn. The course is premised on the key idea that knowledge is actively and socially constructed rather than received passively; effective teaching for 21st century education is to design learning environments that scaffold student inquiry, collaboration and knowledge construction. Three major interrelated areas will be included: The first part introduces contemporary learning theories and key principles of how people learn and discusses the nature of learning how to learn. The second examines individual differences in learning approaches focusing on learning how to learn: Selected topics include conceptions of learning, self-regulated learning, epistemological beliefs, and motivation. The third focuses on learning design and examines how learning to learn can be promoted in classroom and educational settings. Principles, design and classroom practice related to higher-order thinking, collaborative learning and technology-supported learning will be introduced in relation to assessment issues. This course also examines the influences of socio-cultural context and research on the Chinese Learner will also be introduced. Throughout the course, students will be provided with learning experiences that mirror the theories discussed in the course.

Assessment: 100% coursework.
While the society, together with the school environment, is becoming more intricate and diversified, conflicts and dilemmas are commonplace at our workplaces. Cultural, ethical and legal awareness is thus essential in the work of teachers today. This course is an innovation to put together these three aspects. It is envisaged that, through handling authentic problems, the three perspectives will be better separated from each other and at the same time more meaningfully connected to one another.

The course will engage participants in reflecting on common beliefs and practices in educational workplace. The course takes an approach with which conflicts and dilemmas in the practical world are the starting point of collective inquiries. Through collection and analysis of cases of conflicts and dilemmas, key cultural, ethical and legal elements that reside in such situations can be identified, re-examined and researched. Teachers’ diverse understanding and the reasons underlying such diversity will also be an important object of inquiry in the course. The cases for analysis can be about conflicts between schools and teachers, teachers and students, students and students, schools and parents or communities, such as: (1) teacher contract and appraisal; cultural/religious beliefs and practices in school; controversies in school curriculum and teachers’ freedom in teaching; (2) student admission and dismissal; student information; student surveillance, search discipline and punishment; student injuries, harassment, bullying; students with special needs; family negligence and abuse; teacher-student relations; (3) students’ right and freedom of expressions; relation with parents; relation with media and community groups.

Through explorations of dilemmas in handling such conflicts, course participants will grasp some fundamental ethical, legal and cultural theories and concepts as well as information bases, which may include: (1) References to classical theories of consequential and deontological ethics and contemporary theories on ethics of care, social and procedural justice, discourse ethics and communicative action theory; and the general framework of professional ethics of human dignity (autonomy); non-maleficence; beneficence; fidelity; justice; (2) References to the legal system, concepts of contract, tort, rights, discrimination, maltreatment, due process; legal cases with special reference to educational settings; and sources where the relevant case reports, ordinance and information assistance can be sought; (3) References to theories on cultural diversity, different acculturation strategies, etic and emic distinctions, identity dynamics, purposes and emotional challenges of intercultural communication and integration, racial discrimination; and (4) References to studies that research or promote teachers’ cultural, ethical and legal awareness.

Assessment: 100% coursework.

The course contains two parts: (1) a general overview of theories of second language acquisition and second language learning (Critical Period Hypothesis, Contrastive Analysis, Input Hypothesis, Basic Interpersonal Communication Skills and Cognitive Academic Language Proficiency, Inter-Linguistics Transfer, Intra-Linguistics Transfer and Cultural Transfer, Interlanguage, etc.), and their application on classroom teaching; (2) major topics relating to teaching Chinese to NCS students, focusing on the pedagogy of teaching Chinese as a second language, as well as related Chinese literature and cultural knowledge in Hong Kong multicultural context will also be introduced.

The course will provide Chinese language teachers of local NCS students with theoretical and practical understanding of Chinese language teaching and learning. It will present an overview of second language pedagogy, and explores the issues around designing and supporting second language and learning experience of Chinese literature and culture in the classroom. It will discuss the learning style of students from various cultural backgrounds, and how can the theories be applied in the local Hong Kong context to meet the diversified learning needs in a multicultural classroom. Moreover, the course provides an overview of various levels of local Chinese curriculum in Hong Kong (e.g. GCSE, GCE AS-Level, GCE A-Level, Applied Learning Chinese, DSE etc.), and learning resources required for those curricula. Participants will be guided on designing and refining Chinese language materials and
teaching pedagogies that reflect the awareness of students’ learning differences, and at the same time aligns with the theories of second language acquisition and second language learning.

Assessment: 100% coursework.

---

**MEDD8601 Comprehensive guidance and positive youth development: A whole-school approach** (6 credits)

This course will provide an introduction to the theoretical framework of guidance as a whole-school approach, comprehensive guidance, and positive youth development. The whole-school approach will be discussed in the context of school policy formulation, system development, and support measures for preventive, developmental and responsive services for students. The course will consider theoretical and practical bases for designing and implementing comprehensive guidance and counseling programmes to be used in individual, group, and systemic contexts. Practices and research in using positive youth development approach to guidance will be introduced. Relevant good practice in Hong Kong school settings will be shared. The course can be relevant to all administrators, teachers and guidance personnel. Course participants are expected to work individually and in collaborative learning groups to integrate practices and theories.

Assessment: 100% coursework.

---

**MEDD8666 Abnormal psychology and positive psychology** (6 credits)

The course will focus on the theory and research about abnormal psychology and positive psychology. Participants will learn about some common mental disorders in the student populations and how positive psychology can help individuals improve their mental well-being. Participants will be encouraged to explore how the current research may be applicable to their own lives and support the positive development of students. Topics will include “anxiety disorder”, “mood disorder”, “stress disorder”, “developmental disorder”, positive interventions, happiness-increasing exercises, and other efforts of self-improvement in both clinical and nondistressed populations. Other topics of relevance to the study of happiness and well-being will be examined (e.g., “optimism”, “gratitude”, “forgiveness”).

Assessment: 100% coursework.

---

**MEDD8668 Literature in translation and drama-in-education** (6 credits)

This course of literature education, which explores the subjects, styles, theories, and techniques of world masterpieces and children’s literature, provides a global perspective on literature. Students will therefore learn to understand and appreciate aesthetic ideas, human nature, the needs of children, and cultures of people from all over the world. Readings will include Shakespeare’s plays, classic fiction, twentieth-century short stories, children’s classic books, and contemporary adolescent novels translated into Chinese. Note that the selected adult works are on the prescribed literature in translation list of the IB curriculum. This course also utilizes the reader-response concept and fosters skills of teaching world literature by dramatic conventions and improvised theatre games, which involve students in discovering truths about life from discussing, creating, sharing, and performing literature. Students learn to practice teaching methodologies and to explore ways to heed and bring attention and sympathy to the plight and struggle of people in different cultures.

Assessment: 100% coursework.

---

**MEDD8669 Teacher and classroom predictors of students’ academic achievement** (6 credits)

This course examines the research to-date on key teacher and classroom predictors of students’ academic achievement. The design of the course is premised on the philosophy that first, educators should be aware of the importance of classroom compositional and within-class socio-emotional factors that may appear to be distally related to, but have been found to have a substantive impact on student achievement. The course is also designed with the belief that empowered educators should be
conversant with the state-of-the-art scientific knowledge on what really matters in affecting student learning and achievement, and be able to critically evaluate and leverage on the different sources of influences (academic and non-academic) to complement their teaching in the school. The predictors that will be discussed in the course include teachers’ expectations and relationships with students; student peer influences and school socioeconomic status; ability grouping and class size; and computer-enabled teaching-learning in schools. Throughout the course, course participants will be acquainted with results of published meta-analyses interrogating how these variables predicted student achievement.

Assessment: 100% coursework.

MEDD8671    Learning and teaching English as a second language for young learners (6 credits)

This elective provides an opportunity for students to understand how young children learn English as a second language, as a communicative tool and a vehicle to learn. Students will be guided to consider cognitive approaches, sociocultural and sociolinguistic perspectives on second language learning, as well as their applications to the teaching of English as a second language in the early years. The psychology, pedagogy, policy and curriculum issues around learning and teaching ESL for young children will be discussed throughout the elective with reference to both local and international context.

Assessment: 100% coursework.

MEDD8672    Investigating individual and group differences in language learning (6 credits)

This course is appropriate for practising teachers and new teachers who are interested in language learning and teaching issues. The course examines a range of psycholinguistic and sociolinguistic differences found among learners considering them in the context of the second language classroom and the implication of these differences implications for language teaching pedagogy. In particular the course enables students to explore what theory and research tell us about the relationship between language learning and language aptitude, language attitudes and motivation, age, gender, anxiety, and language learning strategies, and considers how these individual variables interact with the language learning process. The course offers the opportunity to consider learners as individuals and to discuss and develop pedagogical approaches that take into account learner commonalities and differences, and to situate the individual differences in the wider context of general language teaching and learning theories. After an overview of the field, each session considers a different aspect of individual learner differences examining the theory and research and drawing out the practical implications for teaching practice.

Assessment: 100% coursework.

MEDD8678    Counselling process, ethics and skills (6 credits)

This course will introduce students to the basic processes, ethics and skills of counselling applicable in schools or other educational settings. Knowledge and understanding of how a counselling relationship develops over time (process) will be focused on and facilitated within a workshop style delivery. Personal development of the course participants will be encouraged through many opportunities to observe, practice skills and reflect on personal interaction and process. Topics will include skills for engaging student, assessment, goal setting and action planning, ethics in counselling, skills for developing helping relationship, skills in managing crisis, and skills for ending the counselling relationship. The course is relevant to all teachers and guidance personnel who wish to enhance their counselling competencies. Participants are expected to engage actively in experiential learning activities and reflection.

Assessment: 100% coursework.
**MEDD8679  Counselling assessment and interventions (6 credits)**

This course will introduce students to the basic principles and goals of psychological, educational and career and life planning assessment, as well as evidence-based interventions applicable in schools or other educational settings. Topics will include: assessment settings, methods, interpretation and use of the assessment results, assessment in programme evaluation, and evidence-based interventions for students at risks (including those with behavioral, social, motivational and career issues). The course is relevant to all teachers and guidance personnel who wish to enhance their counselling competencies. Participants are expected to engage actively in experiential learning activities and reflection.

Assessment: 100% coursework.

**MEDD8804  Critical pedagogy: Theories, practices, and challenges (6 credits)**

This course is a philosophical and pedagogical exploration of the relationships among oppression, power, society, education, and change. It examines how history, power, economics, and discrimination shape societal perspectives and schooling practices, and considers ways to transform education. The course thus aims to introduce participants to an approach to teaching and learning that is far more than the transmission and mastery of content. The aim of this engaged teaching/learning is to promote the practice of freedom, liberation, justice and community. The course will operate as a learning community with all members embracing the role of teaching and learner and with everyone assuming responsibility for their own learning and the learning of the other members.

Assessment: 100% coursework.

**MEDD8811  Classroom research in general studies and liberal studies (6 credits)**

This course provides a step-by-step approach on how to conduct empirical research in General Studies and Liberal Studies. Students will learn from different academic publications (e.g. journal articles) on how to use qualitative, quantitative and mixed methods to do classroom research related to these two subjects. The methods taught in the course include case studies, questionnaire-based surveys, interviews and action research, which are useful in evaluating the effectiveness of Liberal Studies and General Studies in Hong Kong primary and secondary schools. By the end of the course, it is expected that students will understand how to design and conduct a small-scale research project to better understand the nature and/or evaluate their own teaching performance in the subjects.

Assessment: 100% coursework.

**MEDD8813  Teaching oral communication in Chinese language: A critical discussion perspective (6 credits)**

The courses aims at equipping Chinese language teachers with the knowledge and ability to conduct, design and evaluate student-led critical discussion activity to enhance students’ academic Chinese speaking and listening skills and competence. The course is designed to explore the relationship between critical thinking and language learning strategies within Chinese key language area. Topics include framework of speaking and listening processes, construct of speaking and listening competence, Sweetser's model of content, epistemic, speech-act domains, typology of discussion, three approaches of reasoning (deductive, inductive, and abductive), Toulmin model of argument components and its latest development, core basic argument schemes (example, cause and effect, analogy, and information source) and their derivations, pragmatic view of fallacies, and interaction strategies in discussion. The course focuses on applying these topics and concepts to develop interesting critical discussion activities which promote oral skills development and assess effectiveness of discussion for students’ further learning. Special attention is given to using of argument visualization software to make thinking visible during discussion for fostering students’ analytic skill on argument structure. Integration of oral communication and literacy will also be covered to link oral communication with Chinese language curriculum.
Requirement: Students are required to have specialized teacher qualification training on Chinese language such as PGDE Chinese.
Assessment: 100% coursework.

MEDD8815 Introduction to Statistical Methods (6 credits)

This course is designed to introduce students to the most commonly used statistical methods in educational and social science research. No prior knowledge of statistics is required, but essentials of arithmetic and basic algebra will be used throughout the course. Topics covered in this course include descriptive statistics, graphical representations, correlation, regression, basic probability, sampling distributions, confidence intervals, one- and two-sample t-tests, chi-square test, and one-way analysis of variance.
Assessment: 100% coursework.

MEDD8826 Technology and second language teaching and learning (6 credits)

This elective provides students with a fundamental understanding of the principles underlying the use of computer technology in second language learning and teaching as well as hands-on activities of designing technology-enhanced second language teaching and learning experience. It helps students to understand how computer technology can be integrated into language learning and teaching, to become aware of the complex issues around the use of technology in supporting language learning, to develop the ability to critically evaluate language learning technological applications and websites, and to develop the capacity to design and produce computer assisted language learning activities. Students are expected to (1) get familiar with the theoretical background and pedagogical application of different technological platforms and tools for second language learning; (2) be able to evaluate the pedagogical affordances and constraints of different technological applications and platforms; (3) understand what technological application to use for what pedagogical purposes; and (4) design and implement technology-enhanced language learning activities, and understand the key issues that need to be paid attention to ensure the effective implementation of technology-enhanced learning activities. It is expected that throughout this module students will engage in a collaborative learning experience, actively contributing their opinions and helping each other along the learning process.

Requirement: Students should have access to language classes while taking this course. The medium of instruction is Putonghua.
Assessment: 100% coursework.

MEDD8827 Social and emotional needs of the gifted (6 credits)

This course provides an overview of the theory, research, and practice related to working with gifted children, specifically focusing on their social and emotional needs. It explores the theoretical underpinnings of psychosocial variables of the gifted; introduces models of different instructional approaches to facilitate the affective learning for the gifted and curriculum development that is essential for talent development; and covers special populations like underachievement and twice-exceptionality. The role of the teacher in empowering parents on advocacy will also be examined. The course focuses on best practices from theories and research as well as application of these theories in authentic settings, using cases and everyday examples.
Assessment: 100% coursework.
**MEDD8829 Effective strategies for learning and teaching in small class environment for primary education** (6 credits)

Effective strategies to enhance learning and teaching in a small class environment for teachers in primary schools have been well discussed. In alignment with recent curriculum development and promotion of various strategies, such as, e-learning, catering for diversity, group work, STEM, and self-directed learning; there are a lot of development in effective teaching and learning strategies in primary schools. The course aims to develop an understanding in the issues arise in small class teaching environment and strategies for enhancing student learning. Examples of the teaching of different subjects such as mathematics and general studies will be used to illustrate the implementation of various strategies. The content will cover: (1) Principles and strategies for creating a small class environment: The Six Principles of Small Class Teaching and pedagogical strategies such as concept building, lesson planning, questioning and feedback, group work skills and assessment; (2) The learning theories and exemplary practices of teaching strategies with specific theme(s) framed around the six broad principles in enhancing learning and teaching in a small class setting; (3) Opportunities to practise and extend their knowledge and teaching skills (e.g. to plan and reflect on a lesson using the strategies learnt, curriculum planning and development, e-learning, catering for diversity, group work, and self-directed learning.).

Assessment: 100% coursework.

**MEDD8830 Innovation in Higher Education** (6 credits)

This course aims at introducing key concepts and best practices of innovation in advanced higher education systems (e.g., China, Hong Kong, Singapore, Canada, the UK, and the US). The course participants will examine cases of innovation in research, teaching and learning, and service delivery. The challenges will be analyzed by engaging Burton Clark’s multipronged framework of entrepreneurship, Everett Roger’s perspectives on innovation diffusion, Clay Christensen’s heuristic on disruptive innovation, and Chan Kim’s view on value creation. While exploring frameworks of innovation, the students will work individually and collectively to propose a plan for innovation in Hong Kong’s universities and/or their departments of their choice.

Assessment: 100% coursework.

**MEDD8831 Nurturing creativity: Theories and practices** (6 credits)

This course will introduce participants to creativity from both theoretical and practical perspectives. There will be an overview of the key concepts and theories of creativity, as well as discussions on topics such as creativity research, creativity assessment, and the relationship between creativity and other psychological constructs. In addition, participants will explore how creativity can be nurtured in young children and primary and secondary school students. Participants will be equipped with creativity-fostering strategies and techniques to be applied to individuals as well as educational settings. The course is relevant to all teachers and educators who wish to know more about creativity and how it can be nurtured among others. Participants are expected to engage actively in experiential learning activities and reflection.

Assessment: 100% coursework.

**MEDD8832 Developing learners’ English literacy skills in schools** (6 credits)

This course introduces the students to a variety of theoretical perspectives and pedagogic practices in developing learners’ English literacy skills, with a focus on issues of reading and writing concerning in particular learners of KS2 (P4-P6) and above. Topics to be covered in the course will include creative teaching of vocabulary, language learning through reading and writing, corpus-informed teaching, genre-based pedagogy, and pedagogy of multiliteracies. Discussion of these topics will be conducted by integrating theory with pedagogy. Students are encouraged to explore issues and topics of particular importance in their target teaching contexts through active reading of the literature (assigned readings
and other recommended titles), gathering of empirical evidence, and Moodle-based Forum discussions. Additional opportunities of learning from peers will be created through group discussions and presentations in class. 
Assessment: 100% coursework.

**MEDD8833  Teaching Chinese language and literature in IB Language A curriculum** [國際文憑課程 (語言 A): 中國語言和文學教學] (6 credits)

The course reads texts in the International Baccalaureate language A curriculum. It explores the theories and pedagogies of teaching Chinese language and literature to school learners who are native Chinese speakers. The course encourages students to analyze and appreciate literary works from multiple perspectives such as language-based approach, comparative reading of texts, and stylistics. The topics include (a) Introduction of the IB language A curriculum; (b) Pedagogic issues on Chinese language and literature teaching; (c) Theories of assessing students’ learning of literature. Students will be able to acquire the skills of designing school-based curriculum, which demonstrates the philosophy of IB Chinese language and literature. They are also expected to have a deep understanding of the criteria in IB assessments.
Assessment: 100% coursework.

**MEDD8834  World literature and new textualities in the IB Chinese A curriculum** [國際文憑中文課程的世界文學與新興文本] (6 credits)

In a new era that the world is interconnected both by globalization and technology, the International Baccalaureate programmes are committed to foster intercultural understanding and new literacies. The IB Chinese A course introduces students a range of texts in order to develop their social, aesthetic, and cultural literacy, as well as communication skills. This course aims to study the theories and practice of teaching translated literary works, literary genres, and new textualities to school learners who are native Chinese speakers. The course prepares students to make independent literary judgements, appreciate literary works from different cultural perspectives, and consider the role that culture plays in making sense of the literary works. With the rapidly evolving text forms, students will also be exploring the learning and teaching of graphic writing or film and literature, to create better understanding and deeper appreciation in their learners.
Assessment: 100% coursework.

**MEDD8835  Writing for academic success** (6 credits)

It is designed to address the perceived difficulties among some MEd students (in particular full-time students from mainland China) in meeting the Master’s-level academic writing requirements at an English-dominant university. It is meant to be an extension of the existing Writing Workshops provided by the university’s CAES to MEd students. The course subsumes four main topics: (1) learning to read journal articles; (2) tackling strategically important written genres in an MEd programme; (3) writing from sources and citation practices; and (4) publishing from MEd projects/dissertations. The course has a number of features: (i) it adopts an integrated approach by providing guidance on both the reading and the writing of academic texts; (ii) it is evidence-based by drawing upon current research on academic discourse, writing practices, and writing instruction; (iii) it addresses both broader issues (structural and lexico-grammatical dimensions of written genres) and sentence-level issues (e.g., grammar and idiomaticity); and (iv) it aims to foster learning autonomy among MEd students, in particular through the introduction of the use of corpus methods.
Assessment: 100% coursework.
MEDD8836  Personal growth of teachers and guidance personnel (6 credits)

This course will provide an overview of major theories, concepts and principles in education and psychology that can be applied to the personal growth and development of teachers and guidance personnel. Different issues related to positive self and identity development, childhood and family relationships, emotional competence, body and wellness as well as the meaning in life will be examined. The course will provide opportunities for students to develop a deeper understanding of their lives and goals, particularly in the context of becoming effective teachers and guidance professionals. The course is relevant to all teachers and guidance personnel who wish to enhance their counselling competencies. Participants are expected to engage actively in experiential learning activities and personal reflections.
Assessment: 100% coursework.

MEDD8842  Researching action in education (6 credits)

The conception of teachers as reflective practitioners and as transformative intellectuals has gained wide recognition in the field of education. Action research has been identified as one of the major means to help teachers to reflect on their professional practices and to critically assess the sources and consequences of their practices. This course is designed to familiarize students with the nature of action research in reflective and critical perspectives. It also aims to provide students with guidelines in developing their own action research plans in reflecting and critically assessing their professional practices in daily educational situations. Topics to be covered may include: (1) the background of action research in education: the movement of teachers as researchers; (2) the theoretical foundations of action research: hermeneutics, conception of reflective practitioner, critical theory, and the Praxiology; (3) the cyclic nature of research process and action planning; (4) methods of evidence gathering, triangulation and validation; (5) analysis and evaluation of evidences and actions; (6) examples of action research in local educational settings; and (7) ethical issues of action research in education.
Assessment: 100% coursework.
